## **DIRECTIONS FOR USE OF BLACK LEAF TERMITE CONTROL**

**Use Black Leaf Termite Control in a 1.0% water emulsion. This 1.0% emulsion can be made by adding 1 pint of Black Leaf Termite Control to 12 gallons of water; 1 quart to 24 gallons of water, etc. This proportional emulsion should be applied as follows:**

### **Buildings Having Basements or Crawl Spaces**

**Dig a trench along the outside of the foundation walls. In brick or hollow block or concrete foundations, dig a trench to, but not below, the footing. Then as the trench is refilled, treat the soil at a rate of 4 gallons per 10 linear feet for each foot of depth. A trench 3 feet deep would require 12 gallons per 10 linear feet.**

**The objective is to establish a treated soil barrier which will prevent termite entry. Other critical areas may also require treatment. It is suggested that you consult the State Extension Service for advice.**

**This package will make up to 24 gallons of 1.0% emulsion.**
