POLYRAM[®] 80 WETTABLE POWDER

USDA REG. NO. ⁵⁹⁰⁵⁻279-2032

FUNGICIDE

DIRECTIONS FOR USE

Observe days interval between last application and harvest indicated by number in parenthesis following crop.

APPLES (90): Cedar Apple Rust, Scab - Use only on a protective schedule. Polyram 80 WP must be applied before infection occurs. Use 2 pounds per 100 gallons of water starting when green tissue is first exposed and continue applications as needed through petal fall. In the cover sprays, use 1½ pounds per 100 gallons of water. If additional scab control is necessary within 90 days of harvest, another suitable fungicide should be used as required.

PEANUTS (0): Cercospora Leaf Spot - Apply 1 to 2 pounds in 25 to 30 gallons of water per acre when spots first appear on old leaves at the base of the plants. If a heavy rain occurs within 24 hours after the first application, repeat in 3 to 7 days; otherwise repeat at 10 to 14 day intervals. Do not feed treated forage to dairy animals or animals being finished for slaughter.

POTATOES (0): Early Blight, Late Blight - Use 1 to 2 pounds per 100 gallons of water per acre. Start applications when plants are small (2 to 6 inches). Apply at 5 to 10 day intervals. When weather conditions become conducive for late blight infections, use the higher rate per acre and, if necessary, shorten the interval between applications.

ROSES (0): Blackspot - Use 1½ pounds per 100 gallons of water (6 teaspoonfuls per 1 gallon). Apply when new growth first appears and repeat at weekly intervals. During periods of continuous rainy weather shorten application intervals to twice a week.

ACTIVE INGREDIENT:

A polyethylene polymer containing 3 parts of ethylene bis (dithiocarbamate) zinc to 1 part of dithiobis (thiocarbonyl) iminocethylene bis (dithiocarbamate) zinc 80.0%
INERT INGREDIENTS: 20.0%

Zinc expressed as metallic - 15.0%

U. S. Patent: Pending

CAUTION
KEEP OUT OF REACH OF CHILDREN.

May Be Harmful If Swallowed or Inhaled. May Cause Irritation of Eyes, Nose, Throat and Skin! In case of contact, flush with plenty of water for eyes, get medical attention.

WEST HELENA, ARKANSAS

TOMATOES (30): Anthracnose, Early Blight, Gray Leaf Spot, Late Blight - Use 1½ pounds per 100 gallons of water and apply as a full coverage dilute spray. Apply 75 to 160 gallons per acre depending on stage of growth and density of foliage. Start applications 10 to 14 days after field seeded tomatoes emerge or soon after transplanting. Repeat at 7 to 10 day intervals. In areas where growth is rapid and conditions are conducive for disease development, it may be necessary to shorten the treatment intervals. If additional disease control is necessary within 30 days of harvest another suitable fungicide should be used as required.

PECAN: Pecan Scab - Ground Application: Use 2 pounds per 100 gallons of water. Airplane or Mist Blower Application: Use 8 pounds per acre in a minimum of 20 gallons of water. Begin applications when buds are bursting and first leaves are showing. Repeat in 10 to 14 days or when first leaves are half grown. Apply a third application when the tips of the small nuts have turned brown. Repeat as required to maintain control. Do not apply after shuck-split.

Dealers Should Sell in Original Packages Only.

USAGE CAUTION: USE OF THIS MATERIAL IN A MANNER OR AT A TIME OTHER THAN IN ACCORDANCE WITH DIRECTIONS MAY PRODUCE PLANT INJURY, EXCESSIVE RESIDUES OR OTHER UNDESIRABLE RESULTS.
