DIRECTIONS FOR USE

HOUSEHOLD APPLICATIONS—HELENA BRAND C-4 Concentrate is intended in household applications only for use against roaches, waterbugs, silverfish, ants, carpet beetles in premises and not for any other purpose.

To make a 2% water emulsion spray, mix 1 quart of C-4 Concentrate with 23 quarts of water. To make a 2% oil solution, mix 1 quart of C-4 Concentrate with 29 quarts of deodorized kerosene. Apply either formulation as a course wet spray. Apply only on a "SPOT" basis to cracks, surface, or other areas where the insects have been seen resting, running or hiding.

Under no circumstances is application recommended to large areas of walks, floors, shelving, cabinets, ceiling or other room surfaces, nor is application to be made as a space spray.

ROACHES—For control of roaches make thorough treatment of infested cracks and other hiding or resting places. Application of the insecticide to a limited extent may be made on some exposed surfaces where roaches will crawl over it when they come out of hiding. Application should be repeated as often as necessary to maintain effective control.

SILVERFISH—The directions are the same as directions for roaches except that emphasis must be given to treatment of baseboards, areas behind shelving, bookcases and storage areas.

ANTS—The directions for control of ants are similar to those for roaches. Treat ant trails and areas around door sills and window frames where the pests may enter the premises. It is frequently desirable to treat the opening around water pipes, heat ducts, electrical outlets and baseboards where ants may come out into rooms from wall spaces and partitions. Applications should be repeated as often as necessary to maintain effective control.

BROWN DOG TICKS IN PREMISES—The directions for the control of brown dog ticks in premises is similar for roaches. Be sure to make repeated treatments around baseboards, window and door frames, wall cracks, sleeping quarters of household pets and localized areas of floor and floor coverings. The frequency and extent of applications required will depend upon the source and intensity of the infestation. Fresh bedding must be placed in animal quarters following treatment. Do not treat pets, or other animals with these products.

CARPET BEETLES IN PREMISES — Directions for the control of carpet beetles in premises require localized applications to areas of the floor and baseboards. Working the liquid into cracks and under carpets where these insects may be found. Treatment of areas on floors, baseboards, and shelves of closets are also indicated. Repeated applications may be required.

CAUTION

Contact with skin can cause toxic symptoms. Avoid breathing spray and skin contact. In case of illness, call your doctor.

HELENA

BRAND

4 LB. CHLORDANE EMULSION CONCENTRATE

For the control of household Insects Pests such as Ants, Roaches Waterbugs Silverfish Carpet Beetes, Brown Dog Ticks and Subterranean Termites.

CAUTION: KEEP OUT OF REACH OF CHILDREN SEE ANTIDOTE AND OTHER WARNINGS ON SIDE PANEL

contains 4 Pounds Chlordane Per Gallon

ACTIVE INGREDIENTS:	
Technical Chlordane*	45.6%
Kerosene	40.8%
INERT INGREDIENTS:	4.6%
TOTAL	100.0%

*Equivalent to 27.36% Octachloro-4, 7-methanotetrahydroindane, 18.24% related compounds.

Handwritten: Jun-7-1972, UNDER NO. 5905-107

SUBTERRANEAN OUTSIDE OF

TRENCHING—Where outside trenches are desired, it is usually advisable to dig trenches 12 inches deep, but not below the top of 1/2 to 2% chlordane water emulsion per linear foot including back fill. The rate to be used will be determined by the nature of the soils require the least, clays and loams requiring the most. Avoid contamination of potable water supplies.

EXPOSED SOIL AREAS UNDER FOUNDATION WALLS. The remaining soil should be treated with 1/2 to 2% chlordane water-emulsion, at the minimum rate of 1 gallon per 4 linear feet.

UNEXPOSED SOIL AREAS UNDER WAYS, PORCHES. — Treat adjacent areas with same concentration and rate as is used for exposed dirt fill, should be soaked with 1/2 to 2% chlordane water-emulsion. MISCELLANEOUS WOOD AND SOFTWOODS. — Apply on stairs, stoops, supports, trellises, and other woodwork placed on concrete or replaced with concrete preservative.

UNDER ST

ALONG INSIDE OF FOUNDATION WALLS. — Dig trenches 6 inches wide and 6 inches deep, either remove covering or drill holes in concrete. Use 1/2 to 2% chlordane water-emulsion.

CHIMNEY BASES, SUPPORTING AREAS AND OTHER POSSIBLE ENTRY-WAYS INTO PREMISES. — Apply chlordane water-emulsion.

TREATING ENTIRE COVERED SOIL AREAS. — Use 1/2 to 2% chlordane water-emulsion per square yard of area to be treated depending on type of soil. Annual re-inspection with good termite control procedure.

Do not store near open flame. Do not use near open flame. Do not smoke while spraying.

COMBUSTIBLE

Do not reuse empty drum. Return to manufacturer for refilling or crushing and burying in a safe place.

DO NOT USE. POUR, SPILL OR BURN. FLAME.

SUBTERRANEAN TERMITE CONTROL OUTSIDE OF STRUCTURES

TRENCHING—Where outside trenching operations next to foundation walls are desired, it is usually advisable to dig the trench 8 to 12 inches wide and 30 inches deep, but not below the top of the footing if this is shallower. Apply a 1/2% to 2% chlordane water emulsion in the trench at the rate of 1 gallon per linear foot including back fill. The most satisfactory percentage of chlordane to be used will be determined by the nature of the soil encountered. As a rule, sandy soils require the least, clays and loams somewhat more, with peats and mucks requiring the most. Avoid contamination of wells, cisterns and any other possible water supplies.

EXPOSED SOIL AREAS UNDER PORCHES. — Treat by trenching along foundation walls. The remaining soil should be soaked with a 1/2% chlordane water-emulsion, at the minimum rate of 2 gallons per square yard of soil.

UNEXPOSED SOIL AREAS UNDER TERRACES, SIDEWALKS, DRIVEWAYS, PORCHES. — Treat adjacent to the foundation walls with the same concentration and rate as is used in trenching along foundations. Unexposed dirt fill, should be soaked with a 2% chlordane water-emulsion.

MISCELLANEOUS WOOD AND SOIL CONTACT POINTS—Where wooden stairs, stoops, supports, trellises, are in contact with the soil should be placed on concrete or replaced with concrete or wood that has been treated with preservative.

UNDER STRUCTURES

ALONG INSIDE OF FOUNDATION—Use chlordane water-emulsion at strengths of 1/2 to 2%. Where soil surface is exposed, treat a shallow trench about 6" wide dug adjacent to the inner foundation wall with chlordane emulsion at the rate of 1 gallon per 4 linear feet. Where the soil surface is not exposed, either remove covering or drill through it and treat with 1/2 to 2% chlordane water-emulsion.

CHIMNEY BASES, SUPPORTING PIERS. — Treat soil around these areas and other possible entry-ways into dwelling from soil, with a 2% chlordane water-emulsion.

TREATING ENTIRE COVERED SOIL AREAS UNDER STRUCTURES — Use 1/2 to 2% chlordane water-emulsion at about 1/2 to 1 gallon per square yard of area to be treated depending on the depth of penetration required and type of soil. Annual re-inspection with treatment where necessary is a part of good termite control procedure.

Do not store near open flame. Do not spray petroleum solution into a near fire or open flame. Do not smoke while spraying.

COMBUSTIBLE MIXTURE

Do not reuse empty drum. Return to drum reconditioner or destroy by perforating or crushing and burying in a safe place.

DO NOT USE. POUR, SPILL OR STORE NEAR HEAT OR OPEN FLAME.
