### USER SAFETY RECOMMENDATIONS

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

Oil sprays should not be applied on bearing trees during August and September, since during this period they will seriously reduce the solids content of the juice and retard coloring. Oil sprays applied when the fruit is between 3/4" and 1-1/2" in diameter may result in oil blotch.

Avoid spraying with oil during periods of excessively high temperature (over 90° F.). Do not spray with this material if weather reports indicate freezing temperatures.

Do not use this material if it does not mix with water. Do not use in undiluted form.

**MIXING INSTRUCTIONS**

1. Add enough water to the mixing tank for proper agitation.
2. Add micronutrients and other desired pesticides. If dry pesticide products are used, mix the materials with water thoroughly so that they are completely dispersed in the mixing tank. DO NOT add SOL-OIL 97 before a uniform mixture of pesticide and water is obtained.
3. Maintain agitation of the mix until the spray is applied. Flush any spray mix remaining in hoses back into the tank if the solution stands for more than 20 minutes.
4. Ensure that spray equipment is thoroughly clean so that residues from other applications do not remain.

For scalcicides to be effective, complete coverage is essential, necessitating a thorough inside and outside tree application.

**ASPARAGUS, BEANS, BEETS, CORN, SQUASH, TOMATOES, CUCURBITS, & PEPPERS:** Aphids, Mites, Beetle Larvae, Leafminers, Certain Caterpillars - Use 1 to 2 gallons of SOL- OIL 97 to 100 gallons of water.
