With the agitator in motion (120 R.P.M. or more) add the amount of spray oil required for a full tank. Pump this mixture through the overflow and back into the tank for a minute or two. The mixture should turn white, indicating good emulsification. Then fill the tank with water.

If an injector is used, first add 25 to 50 gallons of water to tank with engine running to provide good pressure. Then put injector suction tube into the measured amount of spray oil, opening injector valve to allow the oil to be sucked into the tank. Then fill the tank with water.

DO NOT USE THIS MATERIAL IF IT DOES NOT EMULSIFY.

DORMANT SOLUBLE OIL is a prepared emulsive dormant oil to be used on the crops appearing on this label when these are in the full dormant period.
