ECCO MP-2006

CLASSIFICATION: A mild water-repellent emulsion containing 2,2'-methylenebis (4-chlorophenol).

PROPERTIES:

- Appearance - Slightly viscous, stable white emulsion
- pH - 7.0 to 8.0 (pH 7.5)
- Active Content - 20% minimum (active ingredient percentage)
- Solubility - Soluble in water, insoluble in oil
- Stability - Stable under normal conditions; will be protected from freezing.
- Density - 8.50 lbs./gal.

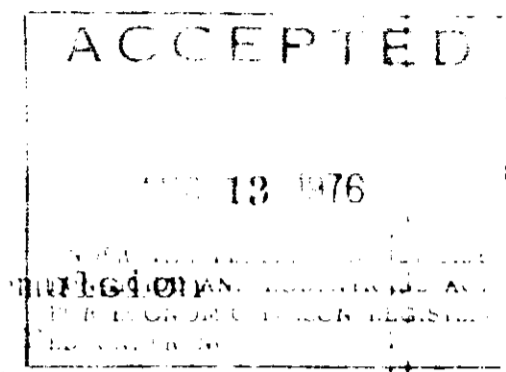

GENERAL COMMENTS:

ECCO MP-2006 is a newly developed mild water-proof emulsion designed to be compatible with a variety of water repellents for a single bath treatment of textiles.

The 2,2'-methylenebis (4-chlorophenol) active material is a well established and accepted fungicide for this type of application and is required in a great many U.S. government and foreign government specifications for treating military textiles.

The compatibility of ECCO MP-2006 with a variety of water repellents, even those known to contain zirconium salts, is one of the outstanding features of this product. Textiles treated with a combination of a water repellent and ECCO MP-2006 show excellent resistance to the leaching of the active material, because of the water insoluble nature and the protection afforded by the water repellent. With the recommended amount of active material deposited, treated fabrics will easily pass standard salt-bath tests:

- For Indoor Use - 0.2% to 0.5% active
- For Outdoor Use - 0.5% to 1.0% active
