

## DIRECTIONS FOR USE

### TERMITE CONTROL & PREVENTION

Soak infested soil areas thoroughly with a solution of 1 gallon of FORBES 74% CHLORDANE in 96 gallons of water or 16 oz. (32 tablespoons) in 12 gallons of water. Next to structure to be protected dig a slanting trench 1-2 feet deep and 8 to 12 inches wide but do not dig below footings. Treat soil with above solution at a rate of one gallon per linear foot of trench as trench is refilled. Trench must extend all around the building being treated. Make annual inspections for possible reinfestation.

### LAWN INSECT CONTROL

Apply 4 oz. (8 tablespoons) of FORBES 74% CHLORDANE per 1000 sq. ft. of lawn in 5-8 gallons of water. Each spring following, apply 2 oz. per 1000 sq. ft. in 5-8 gallons of water. This program will insure the control of surface pests such as Grasshoppers, Chinch Bugs, Chiggers and certain other insects year after year. Do not water lawn for a day or two after application.

Also controlled are sub-soil lawn insects such as ants, Japanese beetle grubs, webworms and certain other insects. Water lawn immediately after application.

Keep children and pets off of treated areas until chemical is washed into soil and is completely dry. Birds feeding on treated areas may be killed.
