

# SANI-BACTOL

*Parachlor*  
CHEMICAL CORPORATION

PK

### DIRECTIONS FOR USE

Add <sup>two</sup> ~~one~~ ounce of SANI-BACTOL to each gallon of tap water at the desired temperature. Use as wash solution. This produces a uniform mixture ready for immediate use as a combined detergent, disinfectant and bactericidal agent. For disinfection, apply SANI-BACTOL wash solution after cleaning surface. Since bacteria are not killed instantly, the longer the time of contact of the bacteria with SANI-BACTOL before it dries, the better the result.

The residual dry film of SANI-BACTOL successfully maintains surfaces in a bacteriostatic condition unless removed by friction.

### PRODUCT DESCRIPTION

SANI-BACTOL is a highly concentrated detergent and disinfecting agent. In the recommended use dilution it produces a solution whose phenol coefficient is high enough to rapidly destroy most pathogenic organisms in less than five minutes. This solution is extremely effective against Staphylococcus aureus. As the applied solution dries it leaves a microscopic film of active substances that are capable of maintaining a bacteriostatic surface until removed by frictional rubbing or wiping contact.

### FORMULA

ACTIVE INGREDIENTS: N. Alkyl (60% C14, 30% C16, 5% C12, 5% C18) Dimethyl Benzyl Ammonium Chloride, Methyl Alcohol, Ortho-Phenylphenol, Sodium Ethylenediaminetetraacetate, N. Alkyl (50% C12, 30% C14, 17% C16, 3% C18), Isoquinolinium Bromide ..... TOTAL: ~~14.672%~~ <sup>7.336%</sup>

INERT INGREDIENTS: Deionized Water, Nonylphenoxy polyethoxyethanol, Sodium Tripolyphosphate ..... TOTAL: ~~85.328%~~ <sup>92.664%</sup>

### PHENOL COEFFICIENT:

(Methods of Analysis A.O.A.C. Use Dilution Confirmation Method—10th Edition—1965)

Staphylococcus aureus	48
S. Typhosa	39

CAUTION: HARMFUL IF SWALLOWED. AVOID CONTAMINATION OF FOODS. "AVOID CONTACT WITH SKIN AND EYES. IN CASE OF CONTACT FLUSH WITH PLENTY OF WATER".
