

PRECAUTIONARY STATEMENTS
HAZARD TO HUMANS AND DOMESTIC ANIMALS

CAUTION

Harmful if swallowed. Avoid contact with eyes or clothing.
Avoid contact with food or drink.

STATEMENTS OF PRACTICAL TREATMENTS

- IF SWALLOWED: Drink a large amount of milk or water. Do NOT induce vomiting because of aspiration hazard. CALL A PHYSICIAN IMMEDIATELY.
IF IN EYES: Flush with plenty of water. See a physician immediately.
IF ON SKIN: Remove contaminated clothing and wash affected areas with soap and water.
IF INHALED: Remove victim to fresh air. Apply artificial respiration if indicated.

ENVIRONMENTAL HAZARDS

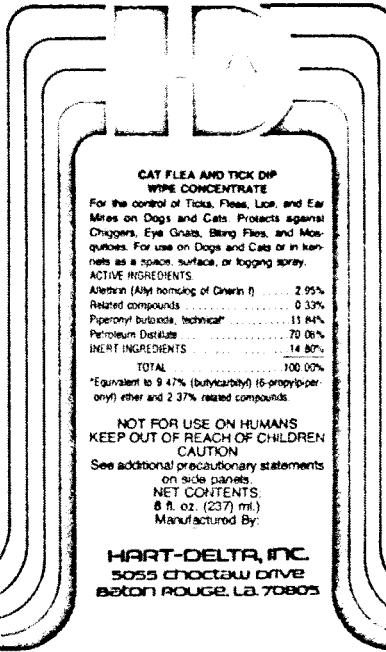

This product is toxic to aquatic organisms. Keep out of lakes, ponds, or streams. Do not contaminate water by cleaning of equipment or disposal of wastes.

PHYSICAL OR CHEMICAL HAZARDS

Do not use or store near heat or open flame.

STORAGE AND DISPOSAL

Store in a cool place out of reach of children. Do not reuse empty container. Wrap empty container and put in trash collection.

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Dilution of this concentrate should be made shortly before use to the quantity required for the individual application. Do not mix with other insecticides before use.

TO CONTROL INSECTS ON ANIMALS: Dissolve 8 fluid ounces of concentrate with water to make 1 gallon of spray, or twice solution (1:2 fluid ounce per pint).

For rapid control of ticks, fleas and lice on dogs and cats, apply this dilution as a wipe or mist spray. For spraying insure thorough coverage, part the fur by stroking against the lay of the hair, as spray is applied. Spray directly on ticks. Apply to moisten the fur lightly. When using as a wipe, use a soft towel, cloth, or sponge to apply. Moisten applicator and gently apply to the hair and skin growth, then with a fair to smooth coat and a soft touch, remove.

To control spinose ear bugs and ear mites, spray the ears with a few drops of this dilution so that it can penetrate the wax down to the surrounding tissues. Repeat treatment once or twice at 2 to 3 day intervals, as necessary.

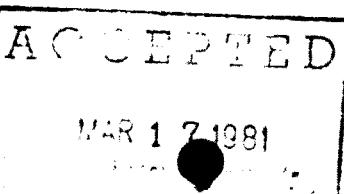

For temporary protection from mosquitoes, eye gnats, biting flies, and chiggers, apply to cover the surface of the hair. Repeat treatments are necessary when insects are troublesome.

TO CONTROL INSECTS IN KENNELS AND ANIMAL QUARTERS: Dilute 8 fluid ounces of concentrate with water to make 1 gallon of spray or 24 fluid ounces per quart. Apply using a mechanical or compressed air sprayer. For rapid cleanout of fleas and ticks in kennels, apply as a surface spray in a good machine adjusted to deliver coarse droplets. Apply to the point of runoff, with special attention to cracks and crevices and other insect harborage places. Bedding should be removed or sprayed thoroughly.

To control fleas, mosquitoes, and gnats in kennels, apply this dilution in a good sprayer adjusted to deliver a fine mist. Use at least 1 quart of spray initially. Reapply 1 quart for each 1000 cubic feet of space. Seal off the enclosed areas with mist. Keep doors and windows closed for 10 minutes or more after application. Do not remain in treated areas and ventilate after treatment is completed.
