DIRECTIONS FOR USE

PREPARATION OF MUSHROOM HOUSE

1. Close all windows, doors, and ventilators
2. Take all precautions necessary to prevent unprotected persons from entering the treated area.

METHOD OF APPLICATION

1. Calculate the area in cubic feet of the house to be treated.
2. Use two (2) fluid ounces of Summit MUSHROOM HOUSE FOGGING INSECTICIDE per 3000 cubic feet of space.
3. Pour the exact amount of insecticide needed for the calculated area into the insecticide tank of the thermal fog generator.
4. Adjust the metering valve or orifice size in the insecticide line to produce a dry fog. Never apply a wet fog. A flow rate of 8 oz. per minute is recommended. (For the DYNA-FOG "70", use the No. 4 setting from the closed position of the insecticide metering valve.)
5. Walk down the center aisle of the house, directing the fog upward. Do not aim the nozzle directly at mushrooms on the growing beds.
6. For best results, the mushroom house should remain closed for 1½ hours after fogging. The house should then be completely ventilated for at least 1 hour before re-entering.
