FLORA-FOG PENTAC™

DIRECTIONS FOR USE

PREPARATION OF GREENHOUSE

1. Close all windows, doors, and ventilators.
2. Take all precautions necessary to prevent unprotected persons from entering the treated area.

METHOD OF APPLICATION

1. Calculate the area in cubic feet of the greenhouse to be treated.
2. Use one (1) fluid ounce of FLORA-FOG GREENHOUSE FOGGING MITICIDE per 3000 cubic feet of space.
3. Pour the amount of insecticide needed for the calculated area into the formulation tank of the thermal fog generator.
4. Adjust the metering valve or orifice size of the formulation line to produce a dry fog. Never apply a wet fog. A flow rate of 3 1/2 per minute is recommended.
5. Start fogging at one end of the house and walk down the center aisle continuously moving away from the fog. Do not over apply to the plants when fogging is begun.
6. For best results, the operator should wear a mask and goggles. Do not breathe the fog. Do not apply to the soil. Do not apply to the foliage of plants to be treated.
