Contains Fast-Killing **DIBROM®**

WILL DESTROY

IN THE

Gnats
Wasps
Fruit Flies
Mosquitoes
Flies

Camping Site
Swimming Pool Area
Patio
Trailer Park
Garden
Marina

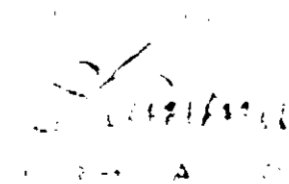

DIRECTIONS FOR USE

1. Fill the insecticide tank of the thermal fog machine with Summit FOGGING INSECTICIDE. Use the insecticide undiluted as it comes out of the container.
2. Follow all directions for operation of the fogger which accompany the machine being used.
3. Outdoor Control of FLIES, MOSQUITOES, GNATS, FRUIT FLIES and WASPS.

Apply fog of insecticide as directed. Stay out of treated area until no visible fog or residue remains. Fog should be directed downward along the prevailing wind to carry the fog into the areas to be treated. Walk through the fog over the entire area. The approximate 1/2 gallon per acre of insecticide (INSECT DIBROM) to each 2500 square feet of area is the amount sufficient for fogging treatment of the area. That is, fog will cover the area for a minimum of 1000 square feet. Maximum results are obtained by fogging the area.
