### DIRECTIONS FOR USE

#### PREPARATION OF GREENHOUSE

1. Close all windows, doors and ventilators. Turn on the automatic fans, if any, to prevent unprotected persons from entering the greenhouse.

#### METHOD OF APPLICATION

1. Calculate the area in cubic feet of the greenhouse to be treated.
2. Use 1.0 ml. FLUID OUNCE OF FLORA FOG GREENHOUSE FOGGING INSECTICIDE per 3000 cubic feet of space.
3. Put the amount of insecticide needed for the calculated area into the formulation tank of the thermal fog generator.
4. Adjust the metering valve on the fogger in the formulation area to produce a dry fog. Never allow a wet fog. Allow rate of 8.0 oz. per 1000 cubic feet recommended.
5. Start fogging at one end of the greenhouse with the center of the fogger 50 feet away from the fogger. Do not spray the fogger at the end of the greenhouse.
6. Fog the entire greenhouse several times. Do not use the fogger in the same area more than once. Do not use the fogger in the same area more than once.
