100% Soluble

Chlorinated 8-Ounce Sticks

Chlorinated 8-ounce sticks control bacteria and algae in swimming pools — Concentrated — Stabilized — 100% Soluble.

Our Sticks contain 90% available chlorine. They are stabilized to protect against chlorine loss due to ultra-violet rays of the sun . . . 100% soluble, leave no calcium residue and dissolve slowly to provide continuous round-the-clock protection.

One chlorinated 8-ounce stick in a floater feeder will deliver 1 P.P.M. available chlorine in a 4500 gallon pool when filter pump is running 24 hours a day. The number of sticks required for your pool will vary depending on chlorine demand, filter cycle and method of feeding: floater, automatic chlorinator or skimmer. High temperatures, dust, rain and number of swimmers can increase chlorine requirements.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with labeling.

POOL START-UP — INITIAL TREATMENT

When filling a new pool or refilling with fresh water at any time:

1. Super chlorinate (shock treat) by adding enough chlorinated granules or liquid to provide approximately 10 P.P.M. available chlorine. Follow instructions on label of product used.
2. Bring pool water pH within a range of 7.2 to 7.6.
3. Add Water Conditioner (Cyanuric Acid) as recommended on label.
4. Start chemical maintenance program.

DAILY CHEMICAL MAINTENANCE

To start chlorination, put one chlorinated 8-ounce stick in your chlorinator for every 4500 gallons of pool water. Test your pool water frequently and adjust the number of sticks being used in order to maintain an available chlorine level of 1 to 2 P.P.M. Maintain pH in the 7.2 to 7.6 range where chlorine is most effective.

CAUTION: Do not throw sticks directly into pool — spotting or etching will occur.

SUPER CHLORINATE — SHOCK TREAT

Super chlorinate every two weeks, after a rain or at the first sight of green or cloudy water. Extremes in temperature or swimmer loads can create a demand for more chlorine than your regular daily dosage provides. Add enough chlorinated granules or liquid to provide approximately 10 P.P.M. available chlorine. Follow instructions on label of product used.

STORAGE AND DISPOSAL

Keep this product dry in a tightly closed container not in use. Store in a cool, dry, well-ventilated area away from heat or open flame. In case of fire, flood or other emergency, flood area with water to dissolve all material before disposal. Do not reuse empty container for collection. Do not contaminate food, feed, or cleaning of equipment.

DANGER

KEEP OUT OF REACH OF CHILDREN

PRACTICAL TREATMENT (FIRST AID): If in milk followed by olive oil or cooking oil.

If on skin: Brush off excess chemical and flush with water for at least 15 minutes. If irritation persists, consult a physician.

If in eyes: Flush with cold water for at least 15 minutes.

PRECAUTIONARY STATEMENTS:

HAZARDS TO HUMANS AND DOMESTIC ANIMALS: DANGER

Highly corrosive. Causes skin and eye damage. Do not get in eyes, on skin or on face. Wear eye protection and rubber gloves when handling. Avoid breathing dust. Remove and before reuse.

ENVIRONMENTAL HAZARDS

This product is toxic to fish. Do not discharge into ponds, or public waters unless in accordance with local, state or federal regulations. For guidance contact the regional office.

PHYSICAL AND CHEMICAL HAZARDS:

STRONG OXIDIZING AGENT

Strong Oxidizing Agent. Mix only with water. Do not add this product to any dispensing of any other product. Such use may cause fire or explosion. Contamination with other chemicals may start a chemical reaction, liberation of hazardous gases, and possible explosion. In case of contamination or fire, isolate container. If possible isolate container in area. Flood with large volumes of water.
