DIRECTIONS FOR USE

COM-O-BRUSH is a pre-mixed emulsifiable concentrate which forms an emulsion in water and will readily mix with water free diesel oil, fuel oil or kerosene.

FOLIAGE TREATMENT Foliar leaf stem sprays are used during the growing season for dense brush or woody vine growth such as Smilax, Greenbriers and other woody vines are a problem. Apply COM-O-BRUSH after foliage is well developed using a drenching spray containing 3 to 4 quarts in 100 gallons of water. Coverage should be complete wetting all parts of the plants, including leaves and stems to point of run-off. Applications are more effective when applied to actively growing plants. Higher volumes are necessary where the brush is very dense and over 8 to 10 feet high. Do not treat during periods of severe drought or in early fall when leaves have lost their healthy green color. Hard to kill species may need retreatment the following season.

BASAL BARK TREATMENT This treatment is not adapted for spraying dense stands of brush and woody vines. It can be used anytime of the year to obtain better kill of some species where dense brush and woody vines do not prevent proper application. Apply COM-O-BRUSH at the rate of 4 quarts in 25 gallons, 1 pint in 3 gallons of fuel oil, diesel oil or kerosene to the basal parts of stems or tree trunks less than 6 inches in diameter, from ground line to a height of 12 to 16 inches, thoroughly wetting to run-off all sides of the indicated area. Often a delayed response to treatment can be expected. Treated brush or trees preferably should not be cut for one year following treatment.

STUMP TREATMENT To prevent regrowth from cut stems and stumps apply a solution of 4 quarts of COM-O-BRUSH in 25 gallons of water free diesel oil, fuel oil or kerosene, 1 pint in 3 gallons. Wet thoroughly the cut surfaces of the stump concentrating the spray on the outside edges. Sides of the stump and exposed roots until runoff to ground line is noticed. Best results are usually obtained when applied to freshly cut stumps with diameters in excess of 4 inches.

FRUIT TREATMENT For trees 4 inches in diameter or larger use the foliage spray treatment. Cut a single half-gallon of overlapping cans completely around the tree just above the fruit line. Treat the cut area with a solution of 2 quarts of COM-O-BRUSH in 25 gallons of water free diesel oil or kerosene, 1 pint in 3 gallons.

BRUSH KILLER

(2,4-D/2,4,5-T Low-Volatile Emulsifiable Concentrate)

Contains 2.0 Pounds Each of 2,4-D and 2,4,5-T Acid Equivalent Per Gallon

ACTIVE INGREDIENTS:

Isooctyl Ester of 2,4-Dichlorophenoxyacetic Acid	34.0%
Isooctyl Ester of 2,4,5-Trichlorophenoxyacetic Acid	32.5%

INERT INGREDIENTS:

.....	33.5%
TOTAL	100.0%

*Equivalent to 2,4-Dichlorophenoxyacetic Acid 22.5%

**Equivalent to 2,4,5-Trichlorophenoxyacetic Acid 22.5%

CAUTION KEEP OUT OF REACH OF CHILDREN.

GENERAL INFORMATION

COM-O-BRUSH BRUSH KILLER is an emulsifiable concentrate which forms an emulsion in water and will readily mix with water free diesel oil, fuel oil or kerosene.

PREPARING THE SPRAY Fill the spray tank with half the required amount of water or water-free diesel oil, fuel oil, or kerosene, add the recommended amount of COM-O-BRUSH emulsifiable concentrate with agitation, and continue filling the spray tank with water or petroleum oil in straight oil mixture; do not let water get into the COM-O-BRUSH itself or into the finished product.

TREATING SMALL AREAS One tablespoonful of COM-O-BRUSH in 1 1/2 gallons of water is about equal to 1 quart in 100 gallons of water.

CAUTION Avoid spray drift to susceptible plants such as cotton, tomatoes, flowers, grapes, fruit trees and ornamentals. Spray drift may cause severe injury to both growing and dormant plants. Coarse sprays are less likely to drift. Although this ester is much less volatile than butyl or isopropyl esters, high temperatures may produce vapors after application which might injure some susceptible plants growing nearby.

Contamination of shallow fish-bearing waters at application rates recommended on this label may kill fish.

DO NOT graze treated areas by dairy animals within seven days after treatment.

DO NOT contaminate irrigation ditches or water used for domestic purposes.

DO NOT use the same spray equipment for applying other materials to plants, as injury will result.

DO NOT store near fertilizers, seeds, insecticides or fungicides.

DO NOT take internally. Avoid contact with skin, eyes or clothing. The following plants are included among those susceptible to COM-O-BRUSH:

- | | |
|-------------|--------------|
| Alder | Gum |
| Ash | Honeysuckle |
| Aspen | Locust |
| Birch | Maple |
| Box Elder | Oak |
| Brambles | Osage Orange |
| Buckbrush | Salmonberry |
| Wild Cherry | Poison Ivy |
| Elderberry | Palmetto |
| Elm | Sumac |
| Greenbrier | Willow |
| Wild Grape | |
