

[6296-28]

SUGGESTED USE

BIOTROL XK is a biological insecticide suitable for use in conventional spray application equipment as an aid in the control of certain lepidopterous larvae (caterpillars) as outlined below.

DIRECTIONS FOR USE

Begin spray applications when loopers are first noticed. BIOTROL XK is most effective on larvae smaller than 1/2 inch in length. Repeat applications should be made as needed to maintain control. BIOTROL XK must be ingested; therefore, good coverage of both sides of the leaves is necessary for good control.

BIOTROL XK is exempt from tolerance restrictions on registered crops and may be applied at any time.

RATES OF APPLICATION

CABBAGE LOOPER ON:

Broccoli, cabbage, cauliflower, collards, lettuce and turnip greens. 1-2 pounds per acre

Low rate should be used except under heavy infestations, when loopers are large or when foliage is very heavy. BIOTROL XK is recommended for use in suitable quantities of water for complete coverage of all foliage, 5-10 gallons of spray per acre by air or 20-100 gallons of spray per acre by ground equipment, depending on the type of application equipment and growth stage of the crop. Low or high gallonage sprayers may be used.

Place required amount of BIOTROL XK in 1/2 sprayer tank of water with agitator running, then finish filling to proper level.

STORE UNDER COOL DRY CONDITIONS: Storage periods of two years are not considered detrimental to the effectiveness of this product.

NOTICE

Seller makes no warranty, expressed or implied, concerning the use of this product other than indicated on the label. Buyer assumes all risks of use and or handling of this material when such use and or handling is contrary to label instructions.
