

Ansar 170

Herbicide

MSMA Liquid

For Selective
Post-Emergent
Weed Control

ACTIVE INGREDIENT:

Monosodium Acid
Methanearsonate* 51.40%

INERT INGREDIENTS: 48.60%

Tetra Arsenic (as elemental)
acid water soluble
form 23.78%

*Product contains 6.67 lbs
MSMA per gallon.

CAUTION:
Keep out of the
reach of children

this product

ORIGINAL LABEL

CAUTION: Keep Out of the Reach of Children

CAUTION: Harmful if swallowed. Avoid contact with skin. Avoid breathing spray mist. Wash hands after using. Avoid storage near food or food products. Keep children and domestic animals off treated areas until this material has been worked into the soil.

ANTIDOTE: If taken internally, get medical attention at once.

READ ENTIRE LABEL BEFORE USING THIS PRODUCT.

WARRANTY - CONDITION OF SALE: DIRECTIONS FOR USE of this product are based on field use and tests by a reliable and should be followed carefully. It is however impossible to eliminate all risks associated with use of this product. Because such factors as soil conditions, foreign material and manner of use for application are all beyond the control of The Ansat Company or the Seller of this product, such factors may cause crop injury, ineffectiveness or other unintended consequences may result. **ALL SUCH RISKS ARE ASSUMED BY THE BUYER.**

Ansat warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes referred to in the directions for use indicated by the above. Ansat makes no other warranties, express or implied, including **FITNESS or MERCHANTABILITY**. In no case shall Ansat or the Seller be liable for consequential, special or indirect damages resulting from the use or handling of this product. The foregoing is a condition of sale by The Ansat Company and is accepted as such by the Buyer.

GENERAL INFORMATION: ANSAR 170 Herbicide is useful for selective post-emergent weed control, particularly for grassy weeds. Its activity is increased by application of a suitable surfactant to the spray solution. It is most effective on young actively growing weeds at air temperatures above 70° F. Its physical properties are quickly inactivated on contact with soil.

MIXING INSTRUCTIONS: ANSAR 170 Herbicide is completely water soluble. Fill the spray equipment tank about half full with water and add the required amount of herbicide and surfactant with agitation. Finish filling the tank with water and apply. After application, flush thoroughly by flushing with water. Do not store spray solution in tank for a prolonged period. Although ANSAR 170 Herbicide is or is moderately volatile, do not use in galvanized or aluminum equipment.

CONTAINER DISPOSAL: Do not reuse empty containers. Wash thoroughly with water and detergent, crush if possible, and discard in a safe place.

DIRECTIONS FOR USE:

COTTON: ANSAR 170 Herbicide is suitable for direct application to cotton for post-emergent control of weeds and grasses such as crabgrass, cleome, lamb's ears, klipflou, lamb's quarters, groundnut, groundhull and parietaria. It should be applied at 1.5 to 2 quarts per acre.

Add 6 pints of ANSAR 170 Herbicide and 1 to 2 quarts of a suitable surfactant to 100 gallons of water and mix thoroughly. Apply spray solution at 40 to 50 psi per treated acre. Weed control is most effective at temperatures above 70° F. For band application on 40 inch rows, apply 1 gallon of spray solution per inch of band width per acre of cotton. Direct the spray stream to the base of the cotton plant. The nozzle should be placed so as to avoid injuring the cotton foliage. If re-growth occurs, make a second application about 1 to 2 weeks after the first.

Slight burning and a reddish discoloration of the cotton leaf may occasionally occur following the recommended treatment, but the cotton plant will develop normally.

Apply only when cotton is 3 inches high to first bloom. Do not apply after first bloom. Do not feed treated forage to livestock, or graze treated areas.

NON-CROP: ANSAR 170 Herbicide is useful for controlling crabgrass, cleome, lamb's ears and certain other weeds on drainage ditch banks, rights of way, storage yards and similar non-crop areas.

Use ANSAR 170 Herbicide at a rate of 1 to 6 pints, plus 1 to 2 quarts of a suitable surfactant in 100 gallons of water. Spray the unwanted vegetation thoroughly to just start of bloom. Use spray equipment that gives good coverage to avoid injury to desirable plants, as required.

Do not contaminate waters used for domestic consumption or by animals, wildlife and aquatic life, or for irrigation purposes.

LAWN AND ORNAMENTAL TURF: ANSAR 170 Herbicide is useful for controlling crabgrass, cleome, groundnut, groundhull, parietaria, klipflou and lamb's ears on lawns and ornamental turf. Do not use on lawns, do not feed and do not graze treated areas. It may be temporarily injurious to St. Augustine, bluegrass and bermuda and quite resistant. Do not use on St. Augustine or Centipede.

Use ANSAR 170 Herbicide at 1 to 2 quarts per acre before treatment. Mix 1 quart of a suitable surfactant with ANSAR 170 Herbicide and 1 gallon of water per acre of a suitable surfactant in 5 gallons of water and apply to an area of 1,000 square feet. Spray thoroughly to wet a desired area. Repeat applications 10 to 14 days later if necessary for good control.

ANSAR 170 Herbicide is manufactured by The Ansat Company, Milwaukee, Wisconsin 54143.

EPA Reg. No. 6308-12

Form No.

THE ANSAT COMPANY,
MILWAUKEE, WISCONSIN

- I. Minor changes in density and a change to a four digit ingredient percent statement has caused the ingredient statement to change as follows:

	<u>NEW</u>	<u>OLD</u>
ACTIVE INGREDIENT:		
Monosodium Acid Methanearsonate*	51.40%	51.3%
INERT INGREDIENTS:	48.60%	48.7%

*Product contains 6.67 lbs. MSMA per gallon.

- II. Minor wording changes as follows:

- A. Under MIXING INSTRUCTIONS, the word "reservoir" was changed to "tank" (lines 1 & 2) and the statement "must be thoroughly dissolved" is changed to "is completely water soluble". Also, a statement concerning potential corrosiveness has been added as follows: Although ANSAR 170 Herbicide is only moderately corrosive, do not use in galvanized or aluminum equipment.
- B. Under COTTON, in the second line "crabgrass" has been added (was always on label under Lawn and Ornamental Turf). Also, in the 5th line, the word "treated" was inserted in per acre, and in the 7th line, "of cotton", has been added after per acre.
