

Ansar 529 H.C.

Herbicide

Western Formulation

MSMA Liquid Plus Surfactant

For Selective
Post-Emergent
Weed Control

ACTIVE INGREDIENT:

Monosodium Acid
Methanearsonate* 47.65%

INERT INGREDIENTS: 52.35%

Total Arsenic (as elemental)
all in water soluble
form 22.05%

*Product contains 6.0 lbs.
MSMA per gallon.

CAUTION:
Keep out of the
reach of children

this product

SPECIMEN LABEL

CAUTION: Keep Out of the Reach of Children

CAUTION: Harmful if swallowed. Avoid contact with skin. Avoid breathing spray mist. Wash hands after using. Avoid storage near feed or food products. Keep children and domestic animals off treated areas until this material has been washed into the soil.

ANTIDOTE: If taken internally, induce vomiting and call physician at once.

READ ENTIRE LABEL BEFORE USING THIS PRODUCT.

WARRANTY - CONDITION OF SALE: DIRECTIONS FOR USE of this product are based on field use and tests believed reliable and should be followed carefully. It is however impossible to eliminate all risks associated with use of this product. Because such factors as weather conditions, foreign material and manner of use for application are all beyond the control of The Ansul Company or the Seller of this product, such things as crop injury, ineffectiveness or other unintended consequences may result. **ALL SUCH RISKS ARE ASSUMED BY THE BUYER.**

Ansul warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes referred to in the directions for use as modified by the above. Ansul makes no other warranties, express or implied, including FITNESS or MERCHANTABILITY. In no case shall Ansul or the Seller be liable for consequential, special or indirect damages resulting from the use or handling of this product. The foregoing is a condition of sale by The Ansul Company and is accepted as such by the Buyer.

GENERAL INFORMATION: ANSAR 529 H.C. Herbicide (Western Formulation) is useful for selective post emergent weed control, particularly grassy weeds. This ANSAR 529 H.C. Herbicide (Western Formulation) has been specifically formulated for use in the arid and semi-arid regions of the Western United States. It is unnecessary to add any other surfactant to the spray solution. Best results are obtained on young actively growing weeds. The phytotoxic properties are quickly inactivated on contact with the soil.

MIXING INSTRUCTIONS: ANSAR 529 H.C. Herbicide (Western Formulation) is completely water soluble. Fill the spray tank about half full with water and add the required amount of herbicide. Finish filling the tank with water using mild agitation. After use, clean equipment thoroughly by flushing with water. Do not store spray solution in tank for a prolonged period. Although ANSAR 529 H.C. Herbicide (Western Formulation) is only moderately corrosive, do not use in galvanized or aluminum equipment.

CONTAINER DISPOSAL: Do not reuse empty container. Wash thoroughly with water and detergent, crush if possible and discard in a safe place.

Do not feed treated foliage to livestock or graze treated areas. Do not contaminate waters used for domestic consumption, or by animals, wildlife and aquatic life, or for irrigation purposes.

DIRECTIONS FOR USE:

COTTON (Arizona - California): ANSAR 529 H.C. Herbicide (Western Formulation) is useful as a directed application in cotton for post-emergent control of weeds and grasses such as johnsongrass, nutsedge, dallisgrass, cocklebur, ragweed, sandbur, crabgrass and puncture vine. It should be applied at the rate of 1/3 gallon per acre.

Mix 7 pints of ANSAR 529 H.C. Herbicide (Western Formulation) in 100 gallons of water. Do not add any surfactant to the spray solution. Apply spray solution at 40 gallons per treated acre. Best results are obtained on young actively growing weeds. For band application in 40 inch rows, apply 1 gallon of spray solution per inch of band width per acre of cotton. Direct the spray solution to the base of the cotton plant. Nozzles should be placed so as to avoid spraying the cotton foliage. Where practical, withhold irrigation for approximately ten (10) days. If regrowth occurs, make a second application 1 to 3 weeks after the first.

Slight burning and a reddish discoloration of the cotton leaf may occasionally occur following the recommended treatment, but the cotton plant will develop normally.

Apply only when cotton is 3 inches high to first bloom. Do not apply after first bloom. Do not feed treated foliage to livestock or graze treated areas.

Preplant Application: If planting of cotton has been delayed and weeds have emerged, use a preplant application. Cotton may be planted immediately following the preplant application.

CITRUS - BEARING AND NON-BEARING (Except Florida): ANSAR 529 H.C. Herbicide (Western Formulation) is useful as a directed application in citrus orchards, such as orange, grapefruit, tangerine, lemon and lime orchards. It should be applied at the rate of 1/3 to 2/3 gallons per acre.

Mix ANSAR 529 H.C. Herbicide (Western Formulation) at the rate of 1/3 gallon in 75 gallons of water. Apply as a directed spray in interspaces and around base of trees. Spray unwanted vegetation to just short of run-off. If regrowth occurs, reapply as required, however, do not exceed 3 applications per year. Do not allow spray solution to contact fruit, leaves, stems or bark. Use a shield, if necessary, for nursery plantings or young trees.

As a spot treatment mix ANSAR 529 H.C. Herbicide (Western Formulation) at the rate of 1/3 gallon in 100 gallons of water. Spray unwanted vegetation to just short of run-off. If regrowth occurs, reapply as required, however, do not exceed 3 applications per year. Do not allow spray solution to contact fruit, leaves, stems or bark. Use a shield, if necessary, for nursery plantings or young trees.

AGRICULTURAL PLANTINGS: ANSAR 529 H.C. Herbicide (Western Formulation) is useful as a directed application in non-bearing vineyards and in non-bearing deciduous fruit and nut orchards, such as apple, peach, pear, plum, prune, apricot, cherry, almond and walnut orchards. It should be applied at the rate of 1/3 to 2/3 gallons per acre.

Mix ANSAR 529 H.C. Herbicide (Western Formulation) at the rate of 1/3 gallon in 50 to 100 gallons of water. Apply as a directed spray in interspaces and around base of trees or vines. Spray unwanted vegetation to just short of run-off. If regrowth occurs, reapply as required, however, do not exceed 3 applications per year.

Do not allow spray solution to contact leaves, stems or bark. Use a shield, if necessary, for nursery plantings or young trees. Do not apply around trees or vines from which fruit will be harvested within one year of treatment.

NON-CROP: ANSAR 529 H.C. Herbicide (Western Formulation) is useful for control of johnsongrass, nutsedge, dallisgrass, cocklebur, crabgrass, sandbur, ragweed, puncture vine, tules and certain other weeds on drainage ditchbanks, rights-of-way, fence rows, storage yards and similar non-crop areas.

Mix ANSAR 529 H.C. Herbicide (Western Formulation) at a rate of 3 to 6 pints in 100 gallons of water. Spray unwanted vegetation sufficiently to provide complete coverage. Use spray equipment that gives good low volume coverage. If regrowth occurs, reapply as required.

LAWN AND ORNAMENTAL TURF: ANSAR 529 H.C. Herbicide (Western Formulation) is useful for control of dallisgrass, sandbur, bahiagrass, nutsedge, crabgrass, chickweed and wood sorrel with little or no injury to tolerant lawn grasses. On new lawns, do not treat until after three mowings. Tolerant grasses may be temporarily discolored. Zoysiagrass, bluegrasses and bermudagrass are quite tolerant. Do not use on St. Augustine or centipede.

Mow lawns 1 to 1 1/2 inches high before treatment. Mix 1 1/3 fluid ounces (8 teaspoons) of ANSAR 529 H.C. Herbicide (Western Formulation) in 2 1/2 gallons of water and apply to an area of 1000 sq. ft. Spray thoroughly to wet all undesirable plants. Repeat applications, 10 to 14 days apart, may be needed for good control.

ANSAR 529 H.C. Herbicide (Western Formulation) is manufactured by The Ansul Company, Marinette, Wisconsin 54143.
