

## DIRECTIONS FOR USE

POLEX is a ready-to-use penetrating preservative coating, designed for the groundline treatment of standing poles and for the treatment of the groundline area of poles in the yard that will be relocated or that have been in storage for prolonged periods. POLEX is also useful for the treatment of piling cut-offs.

**Standing Poles:** Use POLEX only on poles-in-line found by qualified inspector to be satisfactory for continued service. Dig a trench around the pole to the depth determined by the inspector to be necessary for the application of the preservative treatment. This may vary from 12 inches in wet areas to 18 inches or more in arid regions. Scrape away dirt and decayed wood from pole surface. Apply POLEX as a coating  $\frac{1}{8}$  to  $\frac{1}{4}$  inch in thickness, extending from the bottom of the trench to a predetermined height — from 2 inches to 12 inches above ground line to suit local conditions. Application may be by brush, paddle, scoop or mechanical applicator. Wrap the treated section with plastic coated kraft paper, stapling the paper to the pole. Alternately, POLEX may be applied to a suitable wrapping material, and this wrapper may then be stapled to the pole before back-filling the trenched area.

**Piling Cut-Offs:** Treat the cut-end with a coating  $\frac{1}{4}$  inch to  $\frac{1}{2}$  inch thick.

**Yard Poles:** Poles that have been held in storage for a prolonged period or used poles to be relocated, may be treated in decay vulnerable zones in a manner similar to that described for standing poles, taking care to remove dirt and decayed wood before applying treatment.

---

**WARNING**

May be fatal if swallowed. In case of swallowing take an emetic to induce vomiting - CALL A PHYSICIAN. Do not breathe vapors or spray mist. Do not get in eyes, on skin or on clothing. Harmful if absorbed through skin. Causes skin irritation. Do not get on skin. In case of contact wash immediately with soap and water. Keep away from children, pets or livestock. Must not be used near foodstuffs. In handling, hands and arms should be protected with neoprene rubber gloves. Wash hands and arms with soap and warm water, frequently.
