PERMA GUARD D-10 insecticide is named from a naturally occurring calcium dust, which has been approved from the requirements of a residue tolerance by the U.S. Government, on certain stored grains. This type insect control is physical rather than chemical.

This material is an effective post harvest additive to aid in the prevention of insect damage from rice weevil, lesser grain borer, Karnal bunt, insect-pest, and similar insects. It is recommended for use after harvest in rice, corn, and other grains.

Grain treated with this material will have a slightly dust appearance. Maximum grain will be reduced to 0.5 lbs. With grain that has been stored for 15 or more days, the same space as untreated grain. Treated grain may be marketed to standard grade if this height is 2.5 lbs. per hour per ton. A. M. A. for rice and corn. The grain must be stored and processed quickly to prevent dust and moisture from spoiling the grain.

CAUTION
Keep out of the reach of children.

DIRECTIONS
The success of the PERMA GUARD D-10 insecticide will depend on its effectiveness as a grain protectant. It is recommended for use after harvest in rice, corn, and other grains.

FOR COMMERCIAL APPLICATIONS
