JOHNSON'S EAR LOTION

SHAKE WELL BEFORE USING

DIRECTIONS

Johnson's Ear Lotion is a treatment that penetrates to the root of the infestation and mild cases will respond in one or two applications.

We recommend that you clean the ear thoroughly with a cotton swab with a small amount of alcohol, or if you prefer, lay the dog on his side with the infected ear up, then pour peroxide in the infected ear. Use peroxide once a week only. Hold the dog on his side for several minutes, then release him so that he can thoroughly shake his head to remove all moisture. Thereafter, put only about 15 or 20 drops of Johnson's Ear Lotion in each ear and massage ear canal thoroughly with fingertips.

Treat 2 or 3 times a week. In stubborn cases, a competent veterinarian should be consulted.
