WARNING: If swallowed rush to a physician at once

J. R. Johnson Route 3, Summit, Miss.

DIRECTIONS

Johnson's Foot Lotion is recommended for treating moist fungus foot disease of your dog. We assure you, that if properly applied, you will be amazed with results.

The plastic squirt bottle, which is inclosed, is ideal for applying this treatment. Shake thoroughly, and squirt between toes, also on bottom of feet between toes, and a few drops on roots of toenails. If dog has long toenails, cut them off some.

Apply according to condition of dogs feet. For a severe case apply daily for several days, thereafter, 3 or 4 times weekly. For Sarcoptic Mange, apply only once a week. One or two applications is usually sufficient for sarcoptic mange spots, cuts, fungus infection and ring-worm infestations.

Confine dog for several hours after treatment in floored or wire bottom pen.

The above directions are for severe cases. You are to be the judge, and in case your dog has just developed this trouble, treat less often.

For SCREWORM INFESTATION apply a liberal amount of JOHNSON'S FOOT LOTION into the open cut, also around the wound to keep down infection.

Exercise the dog between treatments.

Your letters deeply appreciated
