

FOULING GRAIN

Active Ingredients:65
Inert Ingredients:	5.47
Total:	6.12

Use: For control of feral or domestic pigeons in and about buildings during the winter months.

Prebaiting: Place untreated grain for several days in areas of pigeon activity prior to placement of this bait. Prebait sites should be located in areas close to buildings to attract the birds to the baited areas and other wildlife. Scatter out to five grains of untreated grain for each grain of bait. Prebaiting should be continued daily until uniform grain is accepted readily.

Baiting: This poison bait should be put out only under a sign which has been carefully checked for cleanliness. If any dirt is made, if any tampering is observed, or if the bait is not taken.

Amount of this bait to be used should be determined by the amount of grain consumed by the birds. This baiting should be continued until the birds are no longer seen feeding on the bait. The bait should be placed in a secure container and should be kept out of the reach of children and other animals.

WILSON

DANGER: Convulsive Poison. Do not contaminate feed or pastures. Keep away from children and domestic animals. Wash hands with soap and water after using.

ANTIDOTE: CALL A PHYSICIAN IMMEDIATELY. If less than ten minutes have passed since the poison was taken, give a tablespoon of salt in a glass of warm water to remove unabsorbed strychnine. Treatment by this method after ten minutes may induce onset of convulsions. If convulsions occur, followed by respiratory failure, administer artificial respiration. Have victim lie down in a quiet, darkened room and keep him warm.

Do not re-use bag. Dispose of empty bag by deep burial or burning. Stay out of smoke.
