BACK PANEL

1. For slab on ground construction, apply at the rate of 4 gallons of emulsion per 10 linear feet. Applications may be made by sub-slab injection and/or trenching. Injections should not extend beyond the top of the footings. Treat along the outside of the foundation and where necessary just beneath the slab on the inside of foundation walls. Treatment may also be required just beneath the slab along one side or more of partitions and along all cracks and expansion joints.
 - a. Drill holes in the slab to provide a continuous chemical barrier.
 - b. Where necessary, drill through the foundation walls from the outside and force the emulsion just beneath the slab either along the inside of the foundation or along all the cracks and expansion joints and other critical areas.
 - c. For slabs on foundations 1 foot or less, dig a narrow trench approximately 8 inches wide along the outside of the foundation walls. Do not dig below the bottom of the foundation. The emulsion should be applied to the trench and the soil at 4 gallons per 10 linear feet as the soil is replaced in the trench. Cover the treated soil with a layer of untreated soil.
 - d. For foundations deeper than 1 foot, follow rates for basements.
 2. Retaining walls, foundations or walls of masonry should be treated to make a continuous chemical barrier in voids. Apply at the rate of 2 gallons of emulsion per 10 linear feet.
 3. For basements, apply at the rate of 4 gallons of emulsion per 10 linear feet. Where footing is at least 1 foot of depth from the grade to the bottom of the foundation, application may be made by trenching and rodding at the rate of 4 gallons of emulsion per 10 linear feet per foot of depth. Treat outside of foundation walls and if necessary, beneath the basement floor along the inside of foundation walls, along cracks in basement floors, along interior load bearing walls, round sewer pipes, conduits and pipes.
 4. In crawl space, apply at the rate of 4 gallons of emulsion per 10 linear feet per foot of depth from grade to bottom of foundation. Application may be made by rodding and/or trenching (utilizing the pressure spray). Treat both sides of foundation and around all piers and posts.
 - a. Rod holes should be spaced about 1 foot apart to provide a continuous chemical barrier. Drill holes about 12 to 36 inches apart in the slab to provide a continuous chemical barrier.
 - b. Trench need not be wider than 8 inches nor below the foundation. The emulsion should be mixed with soil as it is replaced in the trench. Cover the treated soil with a layer of untreated soil or other suitable barrier such as polyethylene sheeting.
 - c. For inaccessible crawl spaces, treat soil by an alternate method such as drilling and rodding through foundation walls from the outside.
- All treatment holes drilled in non-union elements in commonly occupied areas of structures should be securely plugged. Reapplication should be made as a spot treatment to these areas.
- Retreatment. Annual retreatment of the entire premises must be avoided.

STATEMENT OF PRACTICAL TREATMENT

- If Swallowed:** Drink 1 or 2 glasses of water and induce vomiting by touching back of throat with finger. Do not induce vomiting or give anything by mouth to an unconscious person. Call a physician or Poison Control Center immediately.
- If Inhaled:** Remove victim to fresh air and apply respiration if indicated.
- If on Skin:** Wash promptly with soap and water. Rinse thoroughly.
- If In Eyes:** Rinse eyes with plenty of water and call physician immediately.

STORAGE AND DISPOSAL

Prohibitions: Do not contaminate water, food or feed by storage or disposal.

Pesticide Disposal: Pesticide, spray mixture or rinsate that cannot be used according to label instructions must be disposed of according to Federal, State or local procedures under the Resource Conservation and Recovery Act.

Container Disposal: Dispose of ~~them~~ according to approved Federal, State or local procedures under the Resource Conservation and Recovery Act. Do not reuse empty container. Dispose of in a sanitary landfill or by incineration if permitted by State and local authorities.

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals

C A U T I O N

May be harmful if swallowed. May be absorbed through skin. Avoid contact with eyes and skin. Do not breathe spray mist. Avoid contamination of feed and food stuffs. Do not use on household pets or humans.

The following protective clothing will be required for all applicators: Water resistant hat; lightweight protective suit or coveralls; and underlined, lightweight boots. Mixer-loaders will be required to wear goggles or face shield, waterproof gloves and a waterproof apron. Applicators working in enclosed areas such as crawl spaces are required to wear respirators approved by OSHA regulation 2a CFR 1910.134 for protection against Lindane.

NOTES TO PHYSICIAN: LINDANE is a central nervous system stimulant. Symptoms include:- conjunctivitis, ecchymosis, headache, staggering fever, nausea, vomiting, mental confusion, irritation to respiratory system. These symptoms result in pulmonary edema, dilation to the heart, extensive necrosis to blood vessels in lungs, liver, kidney, fatty degeneration to liver and kidney and some cases of hypoplastic anemia have been reported.

In case of ingestion: -Gastric lavage followed by saline catharsis; give phenobarbital for normal sedation and potassium gluconate for muscular cramps; prescribe high calcium, high carbohydrate, and high vitamin intake.

Environmental Hazards

This product is toxic to fish, birds and other wildlife. Keep out of lakes, streams and ponds. Do not contaminate water by cleaning of equipment or disposal of wastes. Apply this product only as specified on this label.

Physical or Chemical Hazards

Do not use, pour, spill or store near heat or open flame.

Subject: Amendment - Copy of Lindane Intent to Cancel
SPP Lindane DF
EPA Registration No. 6720-101
Your Application dated June 7, 1964

The amendment referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) is acceptable, provided that you make the labeling changes listed below before you release the product for shipment bearing the amended labeling:

1. Revise the following portion of the statement of practical treatment to read:

If swallowed - Call a physician or Poison Control Center immediately. DO NOT INDUCE VOMITING.
Vomiting may cause aspiration pneumonia.

2. Add the following to the following statement of practical treatment:

When used as a solvent, solvent presents a fire and explosion hazard.
Do not use in areas where fire or explosion hazard is present.
Keep away from children.

When used as a solvent, solvent presents a fire and explosion hazard.
Do not use in areas where fire or explosion hazard is present.
Keep away from children.

3. Add the following to the following statement of practical treatment:

When used as a solvent, solvent presents a fire and explosion hazard.
Do not use in areas where fire or explosion hazard is present.
Keep away from children.
