

TIDE WEED & FEED FOR CITRUS WITH KARMEX®

An Agricultural Fertilizer-Herbicide Mixture For Use In Certain Citrus Groves
(This Product Contains 1.0 Lb. Diuron® Per 100 Lbs. Mixture)

STATEMENT OF INGREDIENTS FOR WEED CONTROL

ACTIVE INGREDIENT:	
Diuron* (3-(3,4-Dichlorophenyl)-1-1 Dimethylurea	1.0%
INERT INGREDIENTS	99.0%
	100.0%

GUARANTEED ANALYSIS AS PLANT FOOD:

Nitrogen	_____
Available Phosphorous (P ₂ O ₅)	_____
Soluble Potash (K ₂ O)	_____

CAUTION

KEEP OUT OF REACH OF CHILDREN

May irritate eyes, nose, throat & skin. Avoid breathing dust. Avoid contact with skin, eyes and clothes.

GENERAL INFORMATION

Tide Weed & Feed for Citrus with Karmex is recommended for pre-emergence weed control of certain weeds such as crabgrass, Johnson grass, pigweed, and purslane in orange and grapefruit groves in Texas. Any well established weeds should first be eliminated by mechanical or other means. For best results, the soil should be well prepared and as free as possible from trash & clods. Sufficient moisture in the form of rainfall or irrigation is necessary after treatment to carry the herbicide into the root zone of germinating weeds. Application should be made with an applicator that has been properly calibrated to a constant speed and rate of delivery. Chemical weed control such as obtained with Tide Weed & Feed for Citrus with Karmex is an important part of a combination weed control program in citrus groves.

RECOMMENDATION:

ORANGE & GRAPEFRUIT GROVES IN TEXAS — For pre-emergence control of certain annual weeds apply 200 - 300 Lbs. Tide Weed & Feed for Citrus with Karmex per acre (of area actually treated). Use the lower rate on lighter soils (sandy loams, silt loams) and the higher rate on heavier soils (clays, clay loams). As crop injury may result, DO NOT USE ON SAND OR LOAMY SANDS OR LIGHT SOILS LOW IN ORGANIC MATTER—LESS THAN 1%. Unless otherwise directed, do not replant treated areas to any crop within two years after last application as injury to subsequent crops may result. Use only one application per year. Use only in citrus groves where trees have been established for at least one year. Do not apply in home plantings of citrus or in areas into which the roots of other valuable plants or trees may extend. Do not apply under citrus trees that have been subject to freezing within 6 months. Avoid contact with foliage and fruit.
