RODENT BAIT

ERKIN ANTI-COAGULANT RODENT BAIT is a highly effective bait mixture, prepared expressly for the control of certain species of mice.

DIRECTIONS

Place where rats and mice feed, water, or urinate . . . or are known to exist . . . and where bait will be protected from children, domestic animals and pets.

For rats, use approximately 1/2 to 1 lb. per station, preferably in protected bait stations. Maintain uninterrupted supply for at least 10 days.

For mice, place tablespoon amounts of bait at 10 to 12 foot intervals. Maintain uninterrupted supply for at least 15 days.

Keep feeding "stations" well supplied until all signs of feeding have stopped. Do not allow "stations" to remain empty longer than 24 hours, as Erkin Anti-Coagulant Rodent Bait #4 must be consumed daily to be effective. Contaminated or spoiled bait should be replaced promptly.

CONTENTS

ACTIVE INGREDIENTS

2-Pivalyl-1, 3-Indandione

0.025%

INERT INGREDIENTS

W-PIVAL

9.975%

CAUTION: KEEP OUT OF REACH OF CHILDREN

Keep away from domestic animals, children, and pets. Domestic animals and pets may be poisoned if they ingest bait. In case of hemorrhage and other symptoms, consult a veterinarian immediately.

In case of hemorrhage, intravenous injections of this solution of Vitamin K combined with blood transfusions are indicated in the case of hemorrhage caused by over doses of bishydroxycoumarin.
