

**DIRECTIONS:**

The following general directions are supplied by us gratuitously but are in no way guaranteed.

**NON-CROP AREAS:**

For use on Non-crop land such as Right of Ways, Industrial Plants, Lumber Yards, Tank Farms, Storage Areas, and Parking Lots for control of most annual and perennial grasses and broadleaved weeds. The effectiveness and length of time that control will last will depend on type of soil, amount of rain and other conditions.

**RATE:**

Under ordinary conditions use at the rate of 1 to 2 gallons diluted with 10 gallons of water per 1,000 square feet. Under conditions where weeds are difficult to control, increase the rate to 3 gallons per 1,000 square feet.

**HOW TO APPLY:**

Use a sprayer which will distribute the required amount evenly over the area to be treated. Use a coarse spray to reduce drift. Application may be made when top growth is dense, but better control will be obtained when weeds are short or when excess growth is mowed and removed before applying.

**WHEN TO APPLY:**

Best results will be obtained if applied shortly before or at the time plant growth begins. Rain or thorough watering after application will cause the material to move to the root zone and thus speed up control.
