DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with the labeling.

PAPER AND PAPERBOARD PROCESS WATER

DANTOCHLOR PG BRIQUETTES is a patented biocidal formulation for application in the paper industry.

DANTOCHLOR PG BRIQUETTES prevents bacterial slime formation and deposition through the rapid delivery of an ideal balance of free and combined halogen. When used properly, DANTOCHLOR PG BRIQUETTES can reduce microbiologically induced corrosion, paper spots, holes, breaks and odors. By limiting microbial growth and bacterial slime formation, DANTOCHLOR PG BRIQUETTES increases machine runnability reducing unscheduled maintenance and lost production.

The patented DANTOCHLOR PG BRIQUETTES composition provides high solubility, fast dissolution and high halogen content without added binders or inert materials for maximum efficiency and product delivery.

DANTOCHLOR PG BRIQUETTES can be used in the manufacture of both food and non-food contact paper and paperboard.

APPLICATION:

DANTOCHLOR PG BRIQUETTES should be added to process water streams at or immediately prior to a point of sufficient mixing such as the fan pump or wire pit.

Standard dissolution feeders can be used for DANTOCHLOR PG BRIQUETTES applications. Make-up machine white waters and returning clarified dilution waters are examples of acceptable treatment waters

INITIAL DOSE: When the system is noticeably fouled apply 0.5 - 2.0 pounds of DANTOCHLOR PG BRIQUETTES per ton of paper produced to achieve 0.1-1.0 ppm total available halogen as chlorine. Repeat treatment until residual is achieved.

SUBSEQUENT DOSE: When microbial control is evident, apply 0.5 - 2.0 pounds of DANTOCHLOR PG BRIQUETTES per ton of paper produced to achieve 0.1-1.0 ppm total available halogen as chlorine. Repeat periodically as needed to maintain control.
