

GENERAL INFORMATION

MCPPP has proven to be a very useful herbicide for control of the surface-creeping or prostrate broad-leaf weeds listed below. Use caution on Seaside, Arlington and Congressional bents which may be injured.

WHEN TO APPLY

For knotweed apply in spring or early summer when weeds are young for best results. For other weeds listed, apply in spring or fall when weeds are growing actively.

EPA Reg. No. 6900-71

DIRECTIONS FOR USE

APPLICATION RATE ON:	PER 1,000 SQ. FT.	PER ACRE
Established greens and fine turf lawns	1½ - 2 fl. ozs.	4 - 5 pints
Other established turf and fairways	2½ - 3 fl. ozs.	6 - 7 pints

Better weed control, especially of knotweed has been obtained with weekly applications at half recommended rate. This is preferred, especially on bent greens and aprons where there has been no previous experience.

HOW TO APPLY

Apply as a water-mixed spray in 20 to 40 gals. water per acre (4 gals. per 1,000 sq. ft.). Apply with boom type sprayer to give thorough coverage. Smaller areas may be treated with a knapsack sprayer. Do not mow for several days before or after application. Withhold sprinkling for 24 hours after application.

OTHER WEEDS

Control of knotweeds, dandelion and plantain is improved by mixing the recommended rate of MCP P TURF HERBICIDE with ½ the quantity of Dill 2, 4-D Turf Herbicide.

CAUTION

Do not apply such a mixture to bent and other fine turf which may be severely injured by 2, 4-D.
