As the world's largest manufacturer of tires, Goodyear has a responsibility to do what it can to protect the environment. In the past, we have been criticized with respect to our use of chemicals and our disposal of waste. We have responded to these criticisms by working to reduce the amount of chemicals we use, by recycling scrap and scrap tires, and by increasing the amount of waste we burn in our own power plants. We have also been working to reduce the amount of waste we send to landfills. We have been successful in these efforts, and we will continue to work to improve our environmental performance. We are committed to being a responsible corporate citizen, and we will continue to work to protect the environment.

As a result of the above, the following is proposed as the definition of the *mean* of a fuzzy number $\tilde{A}$:

$$\text{mean}(\tilde{A}) = \frac{1}{2}(\text{lower}(\tilde{A}) + \text{upper}(\tilde{A}))$$

where $\text{lower}(\tilde{A})$ and $\text{upper}(\tilde{A})$ are the lower and upper bounds of $\tilde{A}$, respectively.

APR 11 1964

Effect of the other species. Because of the high degree of overlap between the glass substrates, the effect of the other species was not studied. We assume that the other species would have a similar effect on the development of the other species.
