

CONTENTS: 1 GALLON

miraclear-L

DIRECTIONS FOR USE

A specific formulation for depressing growth of bloom-producing blue-green algae in lakes and ponds. Its use, however, should be avoided in potable waters or in shallow farm ponds which contain desirable fish. Where a heavy growth of algae is present, treat only about one third of the pond at a time. This will permit the fish to move to an area more favorable for oxygen supply. Best results will be obtained when treatment is done on bright, sunny days when water temperature is over 55°F. Water should remain undisturbed for several hours after treatment.

DOSAGE—Apply one gallon of Miraclear-L to each 1,000,000 gallons of water or to each 3 acre-feet of water. Repeat this dosage at maximum intervals of three weeks. Apply sooner if algae begin to reappear.

Dilute required amount of Miraclear-L in sufficient water to make a working solution to spray the entire body of water to be treated. Shake bottle well before emptying and add remaining solids to the solution. Apply by means of a mechanical sprayer with a fine nozzle. The solution should be stirred constantly while in the sprayer tank by means of an agitator.

CAUTION

Avoid contact with eyes, skin or clothing as it may cause irritation. Wash hands thoroughly after mixing and using. Avoid storage near food products. Rinse empty container thoroughly with water and discard. Note—This product is toxic to fish. Consult your State Fish and Game Agency before applying this product.
