

LIQUID

For round pools 12 feet in diameter (up to 2,700 gallons)
One application of LIQUID TRU PERMANENT ALGAECIDE will prevent the growth of most algae, adding a sparkle and brilliance, a clean fresh clarity which few other types of algaecides can offer.

INITIAL TREATMENT

LIQUID TRU PERMANENT ALGAECIDE must be added to algae free water. To insure this condition, super chlorinate pool for several hours prior to adding the algaecide. Allow the chlorine residual to settle back to normal before resumption of swimming.

DOSAGE:

For initial treatment upon filling pool use:

- One gallon for each 10,800 gallons of water
- One half gallon for each 5,400 gallons of water
- One quart for each 2,700 gallons of water
- One cup for each 675 gallons of water

Using the dosage recommended above, apply the proper amount by pouring it in the pool as you walk around the edge.

FOLLOW UP TREATMENT:

In order to compensate for dilutions caused by fresh make-up water, heavy rainfall, vacuuming, backwash, etc. it may become necessary to add small amounts of algaecide, based on the above dosage, as necessary, in order to maintain the proper algaecide concentration.

WINTERIZING:

LIQUID TRU PERMANENT ALGAECIDE will prevent the growth of most algae during the winter months if the dosage is maintained at recommended levels. However, it is suggested that the dosage be repeated prior to the winter months so as to insure the proper concentration of algaecide in the water.

CONTENTS:

ACTIVE INGREDIENT	Copper Sulfate	10.11%
INERT INGREDIENTS		89.89%
TOTAL:		100.00%
