PREMIUM ALGAECIDE

PREMIUM ALGAECIDE is compatible with all chemicals used for treating swimming pool water. It works best in slightly alkaline water having a pH of between 7.2 and 7.8. PREMIUM ALGAECIDE is simply poured into the water from any point. It quickly distributes itself throughout the entire pool. In pools equipped with circulating systems, (ti) may also be added through the filter.

To sanitize walls, locker rooms and other areas surrounding the pool, use a solution of two ounces of PREMIUM ALGAECIDE to four gallons of water.

DIRECTIONS:

FOR INITIAL TREATMENT UPON FILLING POOL, USE:

One gallon for each 50,000 gallons of water
One quart for each 12,500 gallons of water
One cup for each 3,125 gallons of water

FOR SUBSEQUENT TREATMENT USE:

One quart for each 25,000 gallons of water
One cup for each 6,250 gallons of water

SUBSEQUENT TREATMENTS should be given once every five (5) days. If high temperatures prevail, or if pool has unusually heavy use, add subsequent dosage more frequently.
