DIRECTIONS FOR USE

This product is concentrated and must be diluted before making applications. Mix one tablespoonful of Germain's 1-Naphthaleneacetic Acid Vitamin B1 Solution into one gallon of water.

At time of transplanting, apply mixture to bare roots and soil thoroughly saturating the plant's root area. Plants will not be damaged if larger volumes of diluted solutions are used.

Transplanted shrubs, trees, flowers, rooted cuttings, potted plants and house plants should be treated once a week until the plants are satisfactorily established. Apply mixture to soil around base of plant above root area. Subsequent monthly applications are recommended. Germain's 1-Naphthaleneacetic Acid Vitamin B1 Solution is a root stimulant and should not be applied to the plant's foliage as a fertilizer or plant food.

ACTIVE INGREDIENTS:	BY WT.
1-Naphthaleneacetic Acid	0.10%
INERT INGREDIENTS	99.90%
TOTAL	100.00%

ALSO CONTAINS

B1 (Thiamine Hydrochloride)	0.15%
Ethoxylated Fatty Alcohol	1.00%
(Biodegradable Soil Penetrant)	

CAUTION: Keep out of reach of children and pets. This product is not for human consumption.

**GERMAIN'S 1-NAPHTHALENEACETIC ACID
 VITAMIN B1 SOLUTION**

This material contains a beneficial hormone-like chemical that stimulates the quick formation of new root hairs and revitalizes the delicate feeder roots that are often damaged in transplanting.

Germain's 1-Naphthaleneacetic Acid Vitamin B1 Solution is especially designed to hasten the development of bareroot roses, fruit trees and shade trees and benefits bedding plants, new seedlings and all trees and shrubs that have been moved to new locations. It helps plants become established quickly and insures vigorous growth.

The soil penetrant and wetting agent added, reduces the surface tension of soil and allows the material to gain easy access to root area where it uniformly spreads over the root surface bringing them the proper stimulant for renewed growth.
