

TREATS 4,000 SQ. FT.

DIRECTIONS FOR USE

READ ENTIRE LABEL BEFORE USING

Mow lawn to 1 to 1½ inches high before treating with Germain's Improved Crabgrass Killer. Water lawn thoroughly a few hours before application and withhold water for 48 hours thereafter.

Improved Crabgrass Killer can be applied with a hose-end sprayer, tank sprayer or sprinkling can. Apply at the rate of 1½ ounces (3 tablespoonfuls) in one gallon of water for each 200 square feet of lawn to be treated. Spray thoroughly to wet all weed plants. Two applications, 10 to 14 days apart, are generally needed for good control. Should new growth appear, repeat treatment as necessary. Wash sprayer thoroughly after using.

Best results are obtained when applications are made on clear days with sunny skies, temperatures above 70 and weeds are young and actively growing.

CAUTION: Keep out of reach of children and pets. Harmful if swallowed. Avoid contact with skin, eyes and clothing. Avoid breathing spray mist. Wash thoroughly with soap and water immediately after using. In case of contact with eyes, flush with plenty of water and get medical attention. Keep children and domestic animals off treated areas until material has been washed into the soil.

Store in a safe place away from feed and foodstuffs. When container is empty, wash thoroughly and destroy. Never re-use. Apply this product only as specified on this label. Do not apply when weather conditions favor drift from areas treated.

ANTIDOTE: If taken internally, call a physician at once. Induce vomiting by giving patient a tablespoonful of salt in a glass of warm water. Repeat until fluid is clear.

GERMAIN'S®

GERMAIN'S IMPROVED CRABGRASS KILLER

Germain's Improved Crabgrass Killer is designed for the selective kill of both Hairy and Smooth Crabgrass, Dallisgrass, Chickweed and Nut Sedge with little or no injury to good lawn grasses and dichondra. On new lawns, do not treat until after three mowings. Good grasses may be temporarily affected, especially in hot, dry weather. Rain or watering will revive them. Bent and fescue grasses are generally more sensitive and may be temporarily discolored. Zoysia, Bluegrasses, Bermuda and Dichondra are quite tolerant. **Do not use on St. Augustine grass and centipede.**

A wetting agent has been added to help the material cling to the foliage.

Crabgrass appears in the Spring, and young plants have light green, blunt leaves on a branched stalk. Mature Crabgrass plants are reddish purple. Apply when Crabgrass is young, preferably from the seedling to the early branched stage. Early treatment is recommended. Good soil moisture will give best results. Rainfall after application generally will not affect results.
