ACTIVE INGREDIENTS: 

1.2 Dichloro-3-Chloro-propane 80

Other Halogenated Compounds 4

INERT INGREDIENTS 16

BEST BBC 12-E CONTAINS 79.6% ACTIVE INGREDIENT PER GALLON IN AN EMULSIBLE CONCENTRATE

RECOMMENDED APPLICATION RATES

VEGETABLES: (Broccoli, Brussels Sprouts, Cabbage, Cauliflower, Carrots, Cucumbers, Endive, Lettuce, Okra, Onions, Radishes and Snap Beans):

PREPLANT AT PLANTING POSTPLANT: Apply postplant as soon as plants become fully rotted. Do not exceed 3 people per acre.

LUCURBITS: (Cucumbers, Melons, Summer Squash):

PREPLANT AT PLANTING POSTPLANT: Apply postplant as soon as plants become fully rotted. Do not exceed 3 people per acre.

TOMATOES:

PREPLANT AT PLANTING POSTPLANT: Apply postplant as soon as plants become fully rotted. Do not exceed 3 people per acre.

PINEAPPLES:

PREPLANT AT PLANTING POSTPLANT: Apply postplant as soon as plants become fully rotted. Do not exceed 3 people per acre.

REBRES (Blackberries, Boysenberries, Dewberries, Loganberries, Raspberry):

PREPLANT AT PLANTING POSTPLANT: Apply postplant as soon as plants become fully rotted. Do not exceed 3 people per acre.

CITRUS FRUITS:

PREPLANT AT PLANTING POSTPLANT: Apply postplant as soon as plants become fully rotted. Do not exceed 3 people per acre.

DECIDUOUS FRUITS (Apricots, Grapes, Nectarines, Peaches):

PREPLANT AT PLANTING POSTPLANT: Apply postplant as soon as plants become fully rotted. Do not exceed 3 people per acre.

NUTS: English Walnuts:

PREPLANT AT PLANTING POSTPLANT: Apply postplant as soon as plants become fully rotted. Do not exceed 3 people per acre.

PEANUTS:

PREPLANT AT PLANTING POSTPLANT: Apply postplant as soon as plants become fully rotted. Do not exceed 3 people per acre.

SYMPLANS:

PREPLANT AT PLANTING POSTPLANT: Apply postplant as soon as plants become fully rotted. Do not exceed 3 people per acre.

WARNING! KEEP OUT OF REACH OF CHILDREN

HARMFUL LIQUID AND VAPOR — CONTAINMENT OF MIXTURE MAY BE ABSORBED THROUGH SKIN.

EMULSIBLE LIQUID — FOR CONTROL OF PLANT PARASITIC NEMATODES

GIVE PARTLY EAST PILATE WITH UNCONCEIVED OR INDIFFERENT DIE.

DO NOT EXCEED OVERALL PER ACRE RECOMMENDATION IN A SINGLE YEAR

MIXING DIRECTIONS

This product can be used at its labeled rate with water, with a minimum of 100 gallons of water per acre. This product can be used with water that contains nonionic surfactants (such as Ammonium sulfate) or with water that contains dilute solutions of other agricultural chemicals.

General Directions

Preplant Treatment: Over 1000 square meters per acre. A combination of 1 drop per gallon of water is used per acre. This product is applied as a concentrate or a dilute solution. For best results, a preplant treatment should be applied before planting. This product is effective against most of the nematodes that are commonly found in the soil. Preplant treatments should be applied after planting and before planting. Do not exceed a total of 16 treatments per year.

Drench Treatment: This product is applied at the same rate as a postplant treatment. This product is applied as a dilute solution. Do not exceed a total of 16 treatments per year.

Avoid spilling when mixing. When finished, wash thoroughly with water and detergent and dispose of. Never use this product under spalneles or less than 250 degrees Fahrenheit. When using this product, always wear proper protective clothing and follow all safety precautions.
