WEIGHT
12 OZ. AVOIR.

CAUTION

FOR USE IN AUTOMIZER: One Automizer unit should be installed for each 6,000 cubic feet of space to be treated. The Automizer activates BIG 'D' 100mg. valve once every 15 minutes; after two hours of operation, enough BIG 'D' is suspended in the air to kill a substantial proportion of the flies, mosquitos and gnats present.

Usually the effectiveness of BIG 'D' will be noticeable within one hour after the Automizer is activated. If less than 24 hour control is required, the Automizer should be set to start one hour before control is desired and run one hour after control is no longer needed. Keep in mind that such factors as air flow rate, size of space treated, humidity and room temperature all affect insect activity and control. Therefore, one unit per 6,000 cubic feet should be considered as an average need with adjustments made depending on specific conditions at place of usage. As with any method of insect control, best results are achieved when sanitation and other positive insect-prevention practices are followed.

This 12-oz. can of BIG 'D' contains approximately 3,300 "shots" sufficient to sustain operation for a total of 825 hours (34 days on around the clock basis) or 68 days on a 12-hour basis. When used on a 24-hour basis, it is suggested that the container be changed once a month (once every 2 months on a 12-hour basis).
