 Comments

**DIRECTIONS**

Chekr Brand Penta is a clean solution for protecting wood against fungus growths which cause rot and stain, Termites, Powder Post Beetles, and Carpenter Ants.

Chekr Brand Penta is especially effective in termite control, both as a wood preservative and as a soil poison.

**WOOD PRESERVATIVE**

Before treatment, all wood should be normally dry. All unsound wood should be removed two feet beyond any visible evidence of decay. For best results, Chekr Brand Penta should be applied so as to effect maximum penetration into the wood and maximum absorption at joints and ends. Complete immersion, where possible, in an open tank is the best procedure for accomplishing this. At least five minutes immersion per inch thickness is recommended for all cases. Where wood will be in direct contact with the ground, such as in the case of fence posts, the immersion period should be from 12-48 hours, and the posts should be peeled of bark, dry and well seasoned.

Where the immersion treatment is impractical, heavy brush application may be used. Where the wood will be in direct contact with the ground, several brush applications should be given.

Permit Chekr Brand Penta to dry at least two weeks before applying paint.

Estimated coverage: 5 to 10 gallons per 1000 board feet for open tank treatment; 200 square feet per gallon for brush application.

**TERMITE CONTROL**

Clean out carefully all loose wood and debris under or around infested buildings. Spray all ground under buildings at rate of 2 gallons of Chekr Brand Penta per 5 cubic feet of ground. Break all wood-to-earth contacts, such as steps, door frames, etc., and replace with Chekr Brand Penta treated wood or concrete. Where construction permits, dig a trench around all foundations to a depth of 12 to 18 in. For buildings with deep foundations, trench 30 inches deep. Apply 1/2 gallon per linear foot in trenches up to 15 inches deep and 1 gallon per linear foot in deeper trenches. Do not trench below the footing. Trees, shrubbery or flowers should be protected from the soil by tar or heavy kraftpaper.

**CAUTION**

Do not reuse empty container. Destroy by perforating or crushing. Bury or discard in a safe place. Do not contaminate water by cleaning of equipment or disposal of wastes. Wear rubber gloves and protective clothing when handling freshly treated lumber.

**WARNING:** May be fatal or harmful if swallowed or absorbed through skin. Causes skin irritations. Do not breathe vapor, fumes or spray mist. Do not get in eyes, on skin or on clothing. Wash thoroughly. **INFLAMMABLE, DO NOT USE, POUR, SPILL OR STORE NEAR HEAT OR OPEN FLAME.**

### DIRECTIONS

**Wood Preservation:** In treating new construction lumber, individual members should be soaked in Penta Preservative for at least 3 minutes per inch of thickness. All joints and ends of boards should receive particularly thorough treatment. Treated wood cannot be painted. Do not nail wallboard or other absorbent materials over treated wood until completely dry.

On existing structures Penta Preservative will control fungal rots and decay only. Wood not in contact with the ground such as frames, sub-floors, sills, joists, etc., should be given 2 applications by swabbing or brushing.

Fence posts should be peeled, seasoned, and soaked for at least 24 hours and preferably 48 hours in a vertical position with butts down. The best treatment is full length coverage; if butt treatment is used, set with 12 inches of treated wood extending above ground level.
