

ArChem 46% Emulsifiable Chlordane—Should be diluted with water, 1 part 46% Emulsion to 24 parts of water for a 2% solution. This concentrate contains 4 lbs. of Technical Chlordane per gallon.

[REDACTED]

SUBTERRANEAN TERMITES - Directions for Non-Professional Use
Use Chlordane in a 1.0% water emulsion.

Buildings Having Basements or Crawl Spaces: Dig a trench along the foundation walls. In brick or hollow block or concrete foundations, dig a trench to, but not below, the footing. Then as the trench is refilled, treat the soil at the rate of 4 gallons per 10 linear feet for each foot of depth. A trench 3 feet deep would require 12 gallons per 10 linear feet. The objective is to establish a treated soil barrier which will prevent termite entry. Other critical areas may also require treatment. It is suggested that you consult the State Extension Service for advice.
