

Fluorakil is one of the most effective preparations for the direct poisoning of rats in sewers. It acts rapidly, but as it is tasteless and odorless, there is no evidence of shyness or poison prejudice. With skilled application, excellent control can be obtained. Pre-baiting is not necessary.

#### INSTRUCTIONS FOR USE

Read the precautions carefully on the right panel of this label. To prepare the bait dissolve six parts by weight of Fluorakil in 94 parts by weight of water to give a 6% solution. This 6% solution should be mixed thoroughly one part solution to two parts cereal grains, such as oats, barley, yellow corn, meal, or wheat, or with feed, cracked corn, or wheat, or other suitable and acceptable base, to give a moist bait containing 2% Fluorakil. When using whole cereal grains, there should be allowed to soak in the 6% solution for a period of approx. 12 hours. Bait containers x 4 oz. should be placed at intervals of one section to be treated. Liquid baits should be prepared by dissolving one part by weight of Fluorakil with 10 parts by weight of water. This should be placed in an unbreakable plastic container. For more information, contact THE ARCHEM CORPORATION, 1514 Eleventh Street, Portsmouth, Ohio 45662. Phone (614) 353-1125.

1. For use by trained operators only.
2. **POISONOUS** if swallowed. Avoid all contact with mouth. Wash hands thoroughly before eating, drinking, or smoking.
3. Clean rubber gloves and protective clothing should be worn.
4. Solutions should be carried in un-breakable containers supplied with a pouring tube to avoid spillage.
5. Containers for baits should be clearly marked "POISON". Liquid baits should be placed in non-spill plastic cups.
6. Treated baits should be placed in locations not accessible to children, pets, wildlife, and domestic animals, or in tamper-proof bait boxes.
7. Do not contaminate feed, foodstuffs or water.
8. Keep away from children, pets, domestic animals and wildlife.
9. Burn all surplus bait or bait containers.
10. May cause secondary poisoning in other animals, so pick up and burn or bury deeply all carcasses of pests killed by Fluorakil.
11. Wash out all utensils used in operation.
12. Spilled and unwanted solid baits should be burned.
13. Spilled liquid baits should be mopped up and materials used for this purpose destroyed by burning.
14. Destroy all original containers by flattening tins and burnings.

## ANTIDOTE

If swallowed, speed is essential. Immediately give a tablespoonful of salt in a glass of warm water, and repeat until vomit fluid is clear. Then give two tablespoonfuls of Epsom Salts in water. Have victim lie down and keep warm and quiet. **CALL A PHYSICIAN IMMEDIATELY.**
