DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

To effectively sanitize dairy equipment, meat and food trucks, table tops, and refrigerators, pre-wash with detergent, then use one cup of per 6 gallons of water which will provide 100 ppm available chlorine.

Environmental Protection Agency, Washington, D.C. 20460 and the Center for Environmental and Estuarine Science, University of Maryland System, P.O. Box 38, Piversville, Maryland 21150.

Line 1: Water is a natural resource that is essential for life and the environment. It is a finite resource that must be managed carefully to ensure its availability for future generations. The United Nations has estimated that by 2025, one-third of the world's population will be living in areas with severe water scarcity. This is a dire warning that we must take action now to protect our water resources. One of the most effective ways to do this is by reducing our water consumption. This can be done by using water-saving devices, such as low-flow showerheads and toilets, and by adopting water-saving practices, such as taking shorter showers and turning off the tap when brushing your teeth. Another important way to protect our water resources is by protecting the environment. This can be done by reducing pollution, conserving forests, and protecting wetlands. By taking these steps, we can ensure that there is enough clean water for everyone, now and in the future.
