DIRECTIONS FOR USE
It is a violation of federal law to use this product in a manner inconsistent with its labeling.

DIRECTIONS FOR NEWLY FILLED POOLS:
SEA/CURE is added directly to the pool water at the rate of one pound per 8000 gallons to establish a residual chlorine value of 1.0-1.5 ppm. This dosage should be repeated until the test results for residual chlorine are in the range of 1.0-1.5 ppm. Sun-Screen protection and Stabilization of chlorine in the pool is provided by stabilizer according to label instructions.

REGULAR MAINTENANCE TREATMENT
Adjust whatever proportioning mechanism that might be used to assure a constant treatment level of 1.0-2.0 ppm available chlorine in the pool water (normally 1/2 c. of this product per 10,000 gallons daily). The chlorine level should be checked daily with the use of a suitable test kit. Due to the daily changes in weather, temperature, and bather load, the frequency and the amount of **SLO-TAB 8** added will vary. Pool water pH must be adjusted and maintained regularly in the pH range of 7.2-7.8. For each pound of **SLO-TAB 8**, a half pound of **SEABOARD PLUS IS ADD-D FOR pH CONTROL**.
