WEATHER RESISTANT

OIL IMPREGNATED

WEATHER RESISTANT RODENTICIDE

GENERAL DIRECTIONS: Can be used in wet and damp areas as specified below:

INDOORS: Place bait in runways, at feeding and watering areas, behind boards along walls, between walls, and behind gnawed openings.

OUTDOORS: Place bait along edges of buildings and beside harborage, feeding, and watering areas where mouse activity has been noted.

FOR HOUSE MICE: Place 1/4 - 1/2 oz. (tablespoon amounts) per placement with stations located at 8 to 12 ft. intervals. Maintain constant supply of bait for at least 15 days.

Contaminated or spoiled baits should be replaced promptly. Do not reuse empty container. Destroy when empty. Treated baits must be placed in locations not accessible to children, pets, wildlife and domestic animals, or in tamper-proof bait boxes. Do not allow treated bait to be exposed on bare ground. Do not contaminate water by cleaning of equipment, or disposal of wastes. Keep out of lakes, streams or ponds. Apply this product only as specified on this label.

IMPREGNATED HOUSE MOUSE KILLER

To insure the complete penetration of the bait by the toxicant, this product has been prepared in a two-step operation.

The active ingredient was dissolved in mineral oil to form a concentrate.

This mineral oil concentrate was then used to impregnate the bait.

This process provides the following advantages:

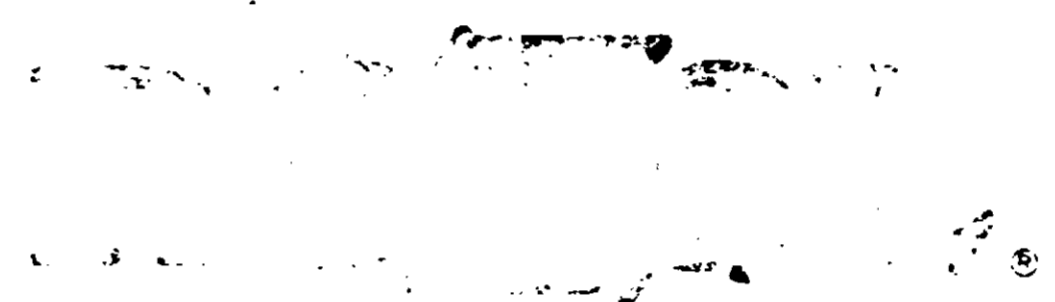

The mineral oil aids in the preservation of the bait, thus reducing the possibility of rancidity that may cause bait rejection.

Impregnation reduces the possibility of the toxicant detaching itself from the bait.
