DIRECTIONS

Fogging operations outdoors should be confined to periods of little or no wind--in general, after sunset. Area to be fogged should always be downwind from fogging unit. Since adult mosquitoes congregate in shrubbery and other vegetations, be sure these areas are thoroughly fogged. Do not use on food or feed crops. Care should be taken, however, not to over-expose plant life, since any oil-base insecticide, when improperly used, may injure vegetation. During peak mosquito breeding season, apply Home & Patio Fogging Spray at frequent intervals, Repeat as necessary. General outdoor fogging should be carried out only under surface inversion conditions which usually exist only from one hour after sunset, through the night, and until sunrise. During this time, providing the wind velocity is under 3-4 miles per hour, the fog will remain in the area and close to the ground the required time to be fully effective.

To control flies, mosquitoes and gnats use up to 1½ gallons Crown "Home & Patio" fogging spray per acre. Apply dense fog when wind is calm 1 to 5 seconds per 1,000 sq. ft.

DO NOT FOG INTO OR NEAR AN OPEN FLAME

WARNING

May be fatal if swallowed, inhaled or absorbed through the skin or eyes. Wash thoroughly with soap and water after handling and before eating or smoking. DO NOT contaminate feed, water or foodstuffs. Keep out of reach of children. If swallowed, induce vomiting immediately and get medical attention. Do not get in eyes, on skin or on clothing. Rapidly absorbed through skin or eyes. Do not breathe vapor spray mist. In case of contact, immediately remove contaminated clothing and flush skin and eyes with plenty of water; for eyes get medical attention. Wear a mask or respirator of a type passed by the U. S. Department of Agriculture for protection against WP. Wash contaminated clothing with soap and hot water before re-use. Do not re-use shoes or boots until free of all contamination. This product is toxic to fish. Keep out of any body of water. This product is highly toxic to bees exposed to direct treatment or residues on crops. Protective information may be obtained from your cooperative agricultural extension service.

ATROPINE is antidotal
