

NET GALLONS

DIRECTIONS FOR USE

CUTWORMS AND ARMYWORMS

To control Cutworms and Armyworms in cereal grain such as wheat, rye or barley, and corn, apply 1 to 2 quarts of this product in 10 to 20 gallons of water per acre. Do not feed treated fodder or straw to dairy animals or animals being finished for slaughter or allow these animals to graze treated areas.

GRASSHOPPERS

TOXAPHENE insecticides can be used to advantage on infestations of young grasshoppers found on roadsides, field margins, or idle land next to cultivated fields. Spraying these infestations when the main hatch is completed or when the young hoppers begin to move off the hatching grounds greatly reduces the acreage to be treated. Use 1 to 1 1/3 quarts of this product in 10 to 20 gallons of water per acre.

TOXAPHENE also prevents grasshoppers from migrating to crops as corn, sorghum, cotton and soybeans if field margins are treated before the hoppers move in. The application of from 2 1/2 to 4 quarts of this product in 10 to 20 gallons of water per acre when used as a spray (depending on the height and density of vegetation) is recommended for general use. A one-third increase in the dosage of spray may be necessary late in the season, when most of the grasshoppers are adults and vegetation is matured.

SPECIAL NOTES

Do not treat sorghum field margins within 28 days of harvest or soybean field margins within 21 days of harvest. Do not treat sorghum more than once after heads start to form. Do not feed treated soybean forage to poultry. Do not feed treated soybean milk pulp to poultry, dairy animals or animals being finished for slaughter.

Do not feed treated forage straw or cotton trash to dairy animals or animals being finished for slaughter unless it is kept from storage temperatures below 45°F.

TOXAPHENE is toxic to fish and wildlife. DO NOT spray on any body of water or apply to any area where specified in the label. Do not spray when weather conditions favor drift from areas treated. Birds feeding on treated areas may be killed. Do not spray after rain if rainfall is likely to occur.

Do not contaminate water by cleaning of equipment or disposal of waste.

Empty the container. Dispose of content by incineration, salvage or by crushing and burying in a deep, non-saturated area away from water supply.

MIXING INSTRUCTIONS

Carefully pour required amount of to battery fed sprayer tank or the agitator. Another method is to pour insecticide into other suitable container. Add an equal amount of water and stir thoroughly with paddle until creamy white. Carefully pour the cream into nearly filled spray tank. Then add a tank. Run agitator for several minutes spraying.

CAUTION: If concentrate does not form suspension with water but tends to separate layer, do not use it as injury to plants may result.

RECOMMENDATIONS FOR SPRAYING AGRICULTURAL CROPS

DO NOT USE WITHOUT DILUTION, mixing as directed in the proper amount give complete coverage with the type of crop to be sprayed. Use 10 to 20 gallons of water and mix in plane use 3 to 10 gallons per acre, depending upon the type of crop.

ALFALFA SEE BUGS: On seed, Apply 1 quart of this product as needed.

BEAN LEAF MINER: 10 years. Apply when bean set and when leaves average four to six inches long. Make two applications at 15 day intervals. Apply after pods begin to form. Apply 1 cup product per acre.

COTTON INSECT CONTROL

BOLL WORM: Fallworm, Rapid Plant Bollworm, Tarnished Plant Bug, Cotton Bollworm: Start control as soon as egg hatched worm can be found.

BOLL: Cotton: 10 years. Apply when cotton combs are visible. Spray 2 parts of the product per acre.

SERPENTINE LEAF SPINNER

SPIDER MITE: Egg: 10 years. Rate per acre the product. Do not spray after 1/2 of the crop starts to bloom.

PETAL BUG: 10 years. Spray a half acre, apply 1 quart of this product per acre. If a lot of bugs in seed tops.

For further specific recommendations for agricultural pest control, consult your state entomologist.

#### MIXING INSTRUCTIONS

Carefully pour required amount of insecticide into partially filled spray tank with agitator running. Another method is to pour insecticide into bucket or other suitable container. Add an equal amount of water and stir thoroughly with paddle until mixture is creamy white. Carefully pour the creamy mixture into nearly filled spray tank. Then add water to fill tank. Run agitator for several minutes before spraying.

CAUTION: If concentrate does not form milky suspension with water but tends to separate as an oil layer, do not use it as injury to plants may result.

#### RECOMMENDATIONS FOR SPRAYING AGRICULTURAL CROPS

**DO NOT USE WITHOUT DILUTION.** Dilute by mixing as directed in the proper amount of water to give complete coverage with the type of equipment used. In ground sprayers use 10 to 20 gallons of water, and by airplane use 3 to 10 gallons of water per acre, depending upon growth of crop.

**ALFALFA WEEVIL - EN SUS BUGS** - On alfalfa or seed. Apply 1 quart of this product per acre as needed.

**BEAN LEAF MINER - BEANS** - Apply after beans have set and whenever miners average four to a leaf. Make two applications at 15 day intervals. Do not apply after pods begin to form. Apply 1 quart of the product per acre.

#### COTTON INSECT CONTROL

**BOLL WEEVIL - BOLLWORM - RAPID PLANT BUG - COTTON LEAFWORM, TARNISHED PLANT BUG, COTTON Fleahopper.** For Bollworm start control as soon as eggs and newly hatched borers are found.

For Cotton - For Rapid plant bug, cotton worm, first appear when cotton is in flower. Apply 2 1/2 pints of this product per acre.

#### SERPENTINE LEAF MINER

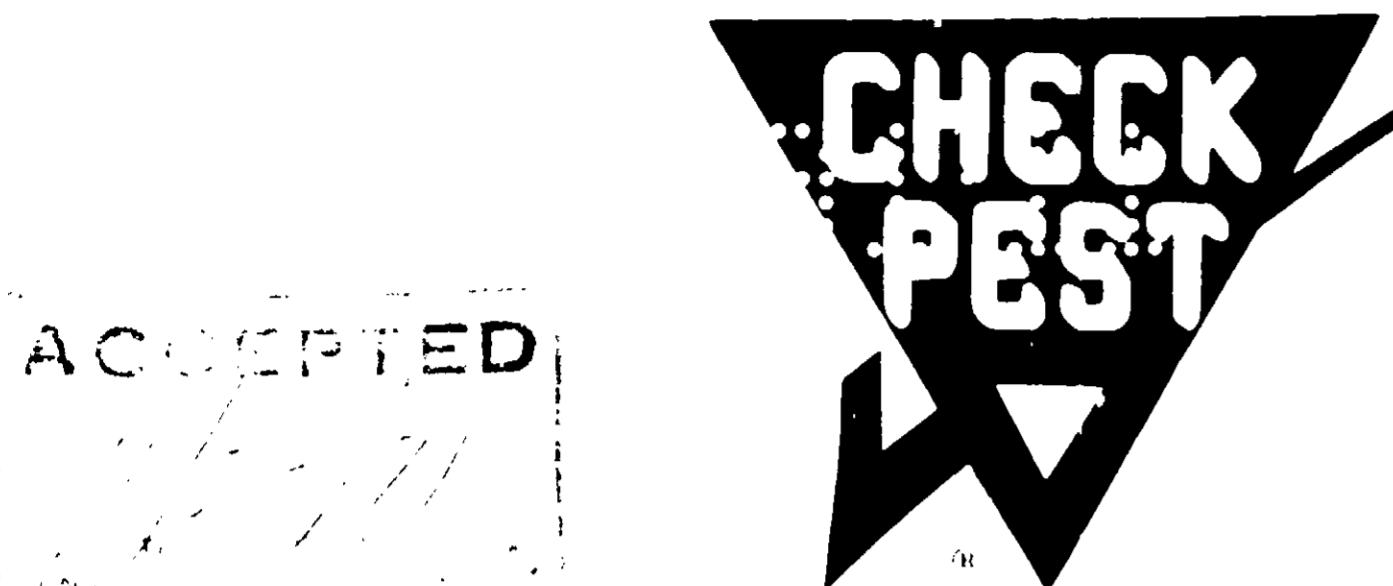

**BEANS - TOMATOES - ORNAMENTALS** - Rate per acre is determined by the product. Do not apply after fruit or soft parts of the crop start to form.

**SPITTLE BUG - N. MPH'S - SEED ALFALFA FIELD** - Apply 1 quart of this product per acre. Use only on first crop to seed crops.

For further specific information contact your agricultural extension service.
