

DIRECTIONS FOR USE

Use in an indoor area to aid in the reduction of flies, mosquitoes and gnats in standard fogging equipment. Dilute 1 gallon of this product with 5 gallons of kerosene, fuel oil, diesel oil or other suitable solvent.

A fine spray is proper fogging machine setting. Test against a sheet of non-absorptive material at approximately 15 feet from nozzle. Barely wet is correct setting. If quite wet damage could occur to foliage, car paint or to glass. If not wet enough satisfactory insect control will not be obtained. With Tifa Dynafog or similar machines the rate of application should be 40 gallons prepared solution per hour with machine moving 5 miles per hour.

Figure 1 illustrates the relationship between the two variables. The x-axis represents the number of years since the first publication, and the y-axis represents the number of publications. The data points show a clear upward trend, indicating that the number of publications has increased over time. The regression line is a straight line that starts at the origin (0,0) and extends upwards to the right, showing a positive correlation between the two variables.
