

"PEST RID"

PELLETED BAIT

KILLS RATS AND MICE

Each particle of the warfarin in this product has been specially coated with a material that reduces detection of the warfarin by the rodents at the time the bait is consumed. The coating may help assure greater acceptance of the bait in cases where rodent awareness of uncoated warfarin is responsible for low bait acceptability.

ACTIVE INGREDIENT

Warfarin (3-Acetyl-4-hydroxy-5-nor)	10.25
Hydramethylnon (2,4,6-trichloro-5-hydroxy-N-methyl-2-methylphenylamine)	0.75
Total	11.00

CAUTION

KEEP OUT OF REACH OF CHILDREN

See Additional Precautions Below.

INSTRUCTIONS

RATS — Open package and place four ounces of "Pest Rid" in dry container next to burrows, in runways, or where rats are accustomed to feed. — Assure an uninterrupted supply of bait for a period of not less than fifteen days, and continue baiting until all signs of feeding have stopped. — Replace stale, damp or moldy baits with fresh bait.

MICE — Open package and place tablespoonful amounts of "Pest Rid" bait in shallow containers where mice or signs of mice have been seen. — Bait stations at intervals of eight to twelve feet are recommended. — Assure an uninterrupted supply of bait for a period of not less than fifteen days.

This rodenticide contains warfarin, an anticoagulant, which means that it does not kill instantly. It causes internal bleeding, which eventually

awareness of uncoated warfarin is responsible for low bait acceptability.

ACTIVE INGREDIENT

Warfarin (Bishydroxycoumarin)

1.00% (1.00% of the total weight of the bait)

INERT INGREDIENTS 99.00%

Total 100.00%

CAUTION

KEEP OUT OF REACH OF CHILDREN

See Additional Precautions Below.

INSTRUCTIONS

RATS: Open package and place four ounces of "Pest Rid" in dry container next to burrows, in runways, or where rats are accustomed to feed. Assure an uninterrupted supply of bait for a period of not less than fifteen days and continue baiting until all signs of feeding have stopped. Replace stale, damp or moldy baits with fresh bait.

MICE: Open package and place tablespoonful amounts of "Pest Rid" bait in shallow containers where mice or signs of mice have been seen. Bait stations at intervals of eight to twelve feet are recommended. Assure an uninterrupted supply of bait for a period of not less than fifteen days.

This rodenticide contains warfarin, an anticoagulant chemical that reduces the clotting ability of the blood and, upon repeated feedings, causes fatal hemorrhage in rats and mice.

CAUTION

KEEP OUT OF REACH OF CHILDREN

Baits should be placed in areas inaccessible to children, pets, wildlife and domestic animals or in tamper proof bait boxes. Do not contaminate water by cleaning of equipment or disposal of wastes. Apply this product only as specified on this label.

DO NOT Reuse Container Destroy When Empty

If swallowed by humans, domestic animals, wildlife or pets, this material may reduce the clotting ability of the blood and cause bleeding. In such case, intravenous and oral administration of Vitamin K combined with blood transfusions are indicated as in the case of hemorrhage caused by overdose of Bishydroxycoumarin. In case of ingestion, call a physician.
