CONTACT SPRAY For control of roaches, mix 11 1/4 fluid ounces of 36% concentration concentrate in a gallon of water to make a 1% solution. Wash cockroaches with Spray, spraying into hiding places such as cracks, crevices, and voids; areas around pipes, under refrigerators, and along woodboards. Spray directly on insects when possible. Repeat as necessary.

This product is toxic to fish and birds. Keep out of water, streams, and ponds. Do not contaminate water by cleaning of equipment or disposal of wastes. Apply this product only as directed on the label.

Food safety and quality have to be considered in the context of the food chain. A food processing unit has to be considered during treatment of the food, as well as the use of the food. When using the results of the food safety study, only when the food is not contaminated.

The first two steps are the most important. The first step is to identify the problem. The second step is to define the problem. The third step is to identify the causes of the problem. The fourth step is to identify the effects of the problem. The fifth step is to identify the stakeholders involved in the problem. The sixth step is to identify the resources available to solve the problem. The seventh step is to identify the constraints on the problem. The eighth step is to identify the risks associated with the problem. The ninth step is to identify the opportunities associated with the problem. The tenth step is to identify the solutions to the problem. The eleventh step is to implement the solutions. The twelfth step is to evaluate the results of the solutions. The thirteenth step is to monitor the results of the solutions. The fourteenth step is to report the results of the solutions. The fifteenth step is to conclude the problem-solving process.
