Marianne Radtke Regulatory Affairs Manager GLB Pool & Spa W175 N11163 Stonewood Dr., Suite 234 Germantown, WI 53022

Subject:

Chlorination Tablets

EPA Registration No. 7364-41 Application Date: May 6, 2009 Receipt Date: May 8, 2009

Dear Ms. Radtke:

The following amendments, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), as amended, are acceptable with the conditions listed below:

- Revision to Storage and Disposal statement per PR Notice 2007-4
- Addition of optional advisory statements
- Addition of optional marketing statements
- Addition of "Responsible Care" symbol

#### **Conditions:**

- 1. On the first page of the label, you must revise the statement "Harmful if swallowed, inhaled, or absorbed through skin" to read "May be fatal if inhaled or absorbed through skin. Harmful if swallowed."
- 2. The First Aid Statement must be revised so that the routes of exposure are listed in the following order: "IF IN EYES", "IF ON SKIN OR CLOTHING", "IF INHALED", "IF SWALLOWED".
- 3. The Precautionary Statements must specify appropriate respiratory protection.
- 4. Should you wish to add/retain a reference to the company's website on your label, please be aware that the website becomes labeling under the Federal Insecticide Fungicide and Rodenticide Act and is subject to review by the Agency. If the website is false or misleading, the product would be misbranded and unlawful to sell or distribute under FIFRA section 12(a)(1)(E). 40 CFR 156.10(a)(5) list examples of statements EPA may consider false or misleading. In addition, regardless of whether a website is referenced on your product's label, claims made on the website may not substantially differ from those claims approved through the registration process. Therefore should the Agency find or if it is brought to our attention that a website contains false or misleading statements or claims substantially differing from the EPA approved registration, the website will be referred to the EPA's Office of Enforcement and

Compliance Assurance.

5. In accordance with PR Notice 2007-4, the Agency defines "refillable" as follows:

"Refillable container" means a container that is intended to be filled with pesticide more than once for sale or distribution. The registrant determines whether a container is intended to be refilled for sale or distribution (in which case it is a refillable container) or if it is not intended to be refilled for sale or distribution (in which case it is not a refillable container) and implements its decision by labeling the container appropriately. This decision also would impact packaging design, packaging material. and distribution and marketing plans.

Please consider whether your containers meet our definition of refillable. If it is not your intention for this product to be marketed in containers which are returned to the distributor for refill and resale, then delete the language relevant to refillable containers, within the Storage and Disposal statement.

#### **General Comments:**

A stamped copy of the labeling, accepted with conditions, is enclosed. Submit one copy of your final printed label before distributing or selling the product bearing the revised labeling.

Should you have any questions or comments concerning this letter, please contact Wanda Henson at 703-308-6345.

Sincerely,

Emily H. Mitchell Product Manager (32)

Regulatory Management Branch II Antimicrobials Division (7510P)

### DIRECTIONS FOR USE:

41. 17.

It is a violation of Federal law to use this product in a manner inconsistent with its labeling

This product is an extremely concentrated form of a swimming pool sanitizing agent. This product is designed to dissolve slowly and at a uniform rate to eliminate the need of frequent hand feeding of granular or liquid chlorination.

Reentry into treated swimming pools is prohibited above levels of 4 ppm chlorine.

FOR CONTINUOUS DAILY CHLORINATION

Before the first use of this product, be sure to take the following steps:

- 1. Adjust the pool water pH value to between 7/2 and 7/8 as determined by a suitable test kit and adjust the total alkalinity to 80 to 150 ppm (parts per million).
- 2 Stabilize pool water to at least 30 ppm with [brand] Stabilizer as directed on the container label. Regular use of [this product] for daily chlorination will provide any needed makeup stabilizer.
- 3. Superchlorinate (shock-treat) your pool water to reach a 4 ppm residual chlorine reading
- 4 Once you complete 1, 2 and 3 above use this product to maintain the free residual chlorine at a safe and efficient 10 = 1.5 ppm, at all times as determined by the daily or more frequent use of a suitable test kit.
- 5: -Using affeeder, floater of skimmer dispenser, immerse one tablet (or as many as required to continuously maintain the safe free available chlorine level) for each 5,000 to 10,000 gallons (18,920 to 37,840 liters) of pool water.

NEVER ADD THESE TABLETS DIRECTLY INTO THE SWIMMING POOL AS DISCOLORATION OF THE POOL LINER OR FINISH MAY OCCUR.

6. Superchlorinate or shock treat your pool water at least twice monthly (more often in warmer climates) during hot weather and peak bather loads using [brand/shock]. Failure to shock treat regularly can result in the growth of algae in your pool.

Optional = for use on residential use swimming pool and spain oducts:
