DIRECTIONS  
by Stephen F. Conrad<sup>®</sup>  
LAWN & GARDEN COUNSELOR

Dear Folks:

(Back Panel cont'd)

I recommend this package of ferti-lome SPRING CRABGRASS PREVENTER because it is effective and economical to use.

1. WHAT IS THIS PACKAGE FOR?

This package of ferti-lome SPRING CRABGRASS PREVENTER is for you to use when you want to control crabgrass by using a selective pre-emergence herbicide on lawns, fairways, golf putting greens, for control of HAIRY AND SMOOTH CRABGRASS, CARPET WEEED, COMMON CHICKWEED, FALL PANCIUM, GREEN AND YELLOW FOXTAIL, GERMINATING JOHNSON GRASS, LAMBQUARTER, PURSLANE, TEXAS MILLET, WITCH GRASS, FLORIDA PUSSLEY, LOVEGRASS AND SPOTTED AND PROSTRATE SPURGE.

2. HOW DO YOU USE IT?

Use fertilizer spreader applying half of material going one way and the other half going cross-wise in order to insure complete coverage. Complete coverage is extremely important. Can be effectively used on established BERMUDA GRASS, ST. AUGUSTINE, GALIA, ZOYSIA, MERION AND KENTUCKY BLUE GRASS, CARPET GRASS AND CENTIPEDL.

Some thinning of fine leafed fescues and bent grasses have been observed. Make application on a calm day to avoid wind drift.

Apply in the early spring before crabgrass and other annual weed seeds germinate. When Forsythia blossoms start to fall is generally a good guide for timing. If spring seeding is necessary, wait 60 days after application to seed. A single spring application should suffice for most geographic locations. To control annual bluegrass or late germinating grasses a late summer or fall application should be applied at a rate of 43 pounds product per 2,500 sq. ft.

0049194

One bag covers 2500 sq. ft.

ferti-lome SPREADER SETTINGS

SPREADER MODEL	TWICE OVER	ONCE OVER
20" Deluxe	5 1/2	7
Cyclone	3	4

Apply when grass leaves are dry. Water lightly after application.

The settings for spreaders can only be taken as approximate. Our products have been thoroughly tested on new spreaders only. Age and condition of spreader, speed of pushing, roughness of lawn, all affect application. Operator should carefully observe rate of application at beginning of job and make corrective adjustments of spreader opening, if necessary.

Do not rake the lawn or disturb soil surface after application.

3. HERE ARE THE RESULTS YOU MAY EXPECT!

ferti-lome SPRING CRABGRASS PREVENTER applied according to directions kill germinating crabgrass seeds, thereby allowing your desirable grasses to grow and provide a beautiful lawn.

Sincerely,

Stephen F. Conrad
